EXECUTIVE SUMMARY

The Strentzel-Muir Gravesite is the final resting place of John Muir, his wife Louie, her parents John and Louisiana Strentzel, and Muir’s daughter and son-in-law, Wanda and Tom Hanna. This family plot is located on a 1.27-acre parcel, a small fragment of the original Strentzel-Muir ranch that once extended over 2,300 acres of the Alhambra Valley and surrounding hills in Martinez, California.

The John Muir National Historic Site was established in 1964 and at that time, was comprised of the Muir House, the Martinez Adobe, and their surrounding grounds. According to its founding legislation, John Muir National Historic Site was established as a public memorial honoring the memory and legacy of John Muir for his contributions to the nation in land conservation and for his crusading efforts in advancing the cause of national parks. In 1988, Congress passed legislation to add the Strentzel-Muir gravesite parcel to the John Muir National Historic Site. Twelve years later, in 2000, the National Park Service purchased the gravesite and has been managing the parcel without the guidance of a comprehensive plan ever since. There has been uncertainty regarding appropriate levels of visitor use and appropriate resource management strategies since the gravesite was set aside fifteen years ago.

The purpose of the Strentzel-Muir Gravesite Plan is to identify appropriate management strategies for the gravesite, John Muir’s final resting place and a fundamental part of the National Historic Site. In addition to supporting the legislated mission of John Muir National Historic Site, the purpose of this plan is to fulfill the broader NPS mission of managing natural and cultural resources while providing visitor use in a manner that considers surrounding landowners who live in close proximity to the gravesite, as well as the desires of the Muir family and the public.

This document presents environmental analysis of three alternatives that the NPS is currently considering for public input and review in accordance with the National Environmental Policy Act of 1969. It describes the alternatives, existing conditions in the plan area, and analyzes the effects of each alternative on various aspects of the environment. Alternative 1 is the No Action Alternative. Alternative 2 is the preferred alternative and would provide for preservation of the historic resources while allowing access for visitors via NPS shuttle, walking, or cycling only. Once on site, visitors would experience the rural, quiet, contemplative setting that has historically characterized the gravesite. A wheelchair accessible footpath leading to the grave markers would be installed, but for the most part development would be minimal. Alternative 3 would also prioritize the preservation of historic resources, but would allow visitors to park at the site (up to two vehicles at a time) in addition to offering NPS shuttle service and pedestrian and cycling access. In all alternatives, preservation of the site’s historic features and quiet, contemplative site character is of paramount importance.

There will be an official 30-day public comment period following the release of this document. Park staff will be available to answer questions and written comments will be accepted at the public open house scheduled during the comment period. Please refer to the project website for the comment review period and Open House dates: www.nps.gov/jomu

Submitting Comments:

- **Electronically**: access the Planning, Environment, and Public Comments (PEPC) website: [http://parkplanning.nps.gov/jomu](http://parkplanning.nps.gov/jomu) (click on the “Open for Comment” link and select the Strentzel-Muir Gravesite Plan).

INTRODUCTION

John Muir National Historic Site is comprised of remnants of the 2,300-plus acre ranch where John Muir lived, raised a family, farmed, wrote, advocated for environmental conservation, and was buried. Established in 1964 and expanded through subsequent legislation, the park today consists of the 9-acre Strentzel-Muir house estate, the more than 326-acre open space lands of Mt. Wanda and the 1.27-acre Strentzel-Muir family gravesite where Muir is buried.

The park was created due in large part to the work of Henry and Faire Sax and the John Muir Memorial Association, who along with other stakeholders, were accustomed to paying tribute to Muir by visiting his gravesite. Through the work of these groups and the National Park Service, the Strentzel-Muir house was listed as a National Historic Landmark in 1962 and became a national park in 1964.

The Strentzel-Muir gravesite parcel was added to the National Historic Site in 2000, and is located 1.5-miles south of the house site, adjacent to Alhambra Creek. The 1.27-acre parcel is a small fragment of the original Strentzel-Muir ranch, and is now surrounded by post World War II-era single-family residences to the north, west and south, and bounded by the creek to the southeast. The gravesite is the resting place of John Muir, his wife Louie, her parents Dr. John Strentzel and Louisiana Strentzel, and Muir’s daughter and son-in law, Wanda and Tom Hanna. Additionally, there are gravemarkers for John and Louisiana Strentzel’s children Johnnie and Lottie and John’s brother Henry, but it is not known if they are buried at this site. The parcel also contains a remnant of the original historic pear orchards that once extended throughout Alhambra Valley. Additional historic trees dating back to the Muir time period also add to the setting.

Figure 2. John Muir National Historic Site, gravesite location map
PURPOSE OF AND NEED FOR THE PLAN

Purpose of the Plan
According to its founding legislation, John Muir National Historic Site was established as a public memorial honoring the memory and legacy of John Muir for his contributions to the nation in land conservation and for his crusading efforts in advancing the cause of national parks. The purpose of the Stentzel-Muir Gravesite Plan is to meet this legislative charge by identifying appropriate management strategies for the gravesite, John Muir’s final resting place and a fundamental part of the National Historic Site. In addition to supporting the legislated mission of John Muir National Historic Site, the purpose of this plan is to fulfill the broader NPS mission of managing natural and cultural resources while providing visitor use in a manner that considers surrounding landowners who live in close proximity to the gravesite, as well as the desires of the Muir family and the public.

Need for the Plan
The original John Muir National Historic Site was established in 1964 and was comprised of the Muir House, the Martinez Adobe, and their surrounding grounds. In 1980, the National Park Service conducted a study to assess the feasibility of adding the gravesite to the John Muir National Historic Site, finding that the addition would in fact be feasible. At that time the 1.27-acre parcel was owned by the Muir-Hanna Family Trust. In 1988, Congress passed legislation to add the Stentzel-Muir gravesite parcel to John Muir National Historic Site. Though the parcel remained in private ownership, in 1991 the National Park Service completed a General Management Plan for the entire National Historic Site that included a conceptual strategy for managing the gravesite parcel at the point when it came into NPS ownership. In 1993, the American Land Conservancy purchased the property from the Muir-Hanna Family Trust with the intent of transferring it to the National Park Service when funds became available. The National Park Service purchased the gravesite property from the American Land Conservancy in 2000.

The NPS has been managing the gravesite without the guidance of a comprehensive plan since acquiring the parcel. There has been uncertainty regarding appropriate levels of visitor use and appropriate resource management strategies since the gravesite was set aside. This planning effort will set park direction for management of resources and visitor use, removing the uncertainty.

SCOPE OF ENVIRONMENTAL ASSESSMENT

This EA analyzes two Action Alternatives and the No Action Alternative. It describes the alternatives, existing conditions in the plan area, and analyzes the effects of each alternative on various aspects of the human and natural environment.

RELATED LAWS, LEGISLATION AND MANAGEMENT GUIDELINES

The following is a summary of guidance documents and regulations relevant to the Stentzel-Muir Gravesite Plan.

The NPS Organic Act directed the U.S. Department of the Interior and the NPS to manage units of the national park system “to conserve the scenery and natural and historic objects and wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.” (54 U.S.C. 100101). The Organic Act provides overall guidance for the management of John Muir National Historic Site, including the gravesite.

The Organic Act establishes the management responsibilities of the NPS. Although Congress has given the NPS management discretion to allow certain impacts within parks, that discretion is limited by the statutory requirement that park resources and values be left unimpaired, unless a particular law directly and specifically provides otherwise. This cornerstone of the Organic Act establishes the primary responsibility of the NPS and
ensures that park resources and values will continue to exist in a condition that will allow the American people to have present and future opportunities for enjoyment of them.

Section 106 of the National Historic Preservation Act (NHPA) directs federal agencies to consider the effects of their actions on properties that are eligible for, or included in, the National Register of Historic Places. NHPA requires that these assessments of effects are provided for review and comment to the State Historic Preservation Officer (SHPO), Tribal Historic Preservation Officer (where applicable), the Advisory Council on Historic Preservation, interested parties and the public. For the undertaking proposed in this EA (the preferred alternative), the public is being included in the Section 106 review process via the National Environmental Policy Act review process. More information about how Section 106 review is being carried out for this EA and planning process can be found in the “Consultation and Coordination” chapter of this document.

**National Environmental Policy Act, 1969 (42 U.S.C. 4321 et seq.)**

The National Environmental Policy Act (NEPA) requires the identification and documentation of the environmental consequences of federal actions. Regulations implementing NEPA are set by the President’s Council on Environmental Quality (CEQ). CEQ regulations establish the requirements and process for agencies to fulfill their obligations under the act.

**1970 National Park Service General Authorities Act (As Amended in 1978—Redwood Amendment) (54 U.S.C. 10010 et seq.)**

The Redwood Amendment (National Park Expansion Act of 1978) mandates that the NPS conduct its actions in a manner that will ensure no “derogation of the values and purposes for which these various areas have been well-known, except as may have been or shall be directly and specifically provided by Congress”. This act prohibits the NPS from allowing any activities that would cause derogation (impairment) of the values and purposes for which the parks have been established (except as directly and specifically provided by Congress in the enabling legislation for the parks). Therefore, all units are to be managed as national parks, based on their enabling legislation and without regard for their individual titles, such as “Historic Site”, “National Monument”, “National Memorial”, etc.

**National Park Service Management Policies (2006)**

The 2006 NPS Management Policies include direction for preserving and protecting cultural resources, natural resources, processes, systems, and values, and for providing opportunities for visitor enjoyment.

The act of August 31, 1964 (Public Law 88-547; 78 Stat. 753), authorized the Secretary of the Interior to acquire, for purposes of designating, “the John Muir National Historic Site, to be set aside as a public national memorial to John Muir in recognition of his efforts as a conservationist and a crusader for national parks and reservations. The Secretary of the Interior shall administer, protect, and develop such national historic site in accordance with the provisions of the [Organic] Act entitled ‘An Act to establish a National Park Service, and for other purposes,’ approved August 25, 1916 (39 Stat. 535), as amended and supplemented, and the Act entitled ‘An Act to provide for the preservation of historic American sites, buildings, objects, and antiquities of national significance, and for other purposes,’ approved August 21, 1935 (49 Stat. 666), as amended.”

The act of October 31, 1988 (Public Law 100-563; 102 Stat. 2830) authorized the Secretary of the Interior to add the gravesite parcel to the National Historic Site. The Secretary of Interior shall acquire only such interests in the John Muir grave site as may be necessary to preserve the site in its present undeveloped condition. The lands and interests in lands . . . shall be administered as part of the John Muir National Historic Site.

The John Muir National Historic Site General Management Plan (GMP) includes guidance for the gravesite, which at that time, in 1991, was not yet in NPS ownership. The plan stated that the area would be managed as an historic area, with emphasis on preservation of the existing scene. Minor improvements would include a single hardened parking space at the entrance of the tract for exclusive use by NPS staff. A low, movable barrier would be used to block public access to this parking spot. A small rustic wooden sign would be placed at the entrance. No signs would be placed on Alhambra Valley Road. A foot trail would be developed across the tract to the grave markers. Although suggested by members of the public, providing visitor parking for the gravesite at nearby John Swett Elementary School was deemed infeasible. The GMP committed John Muir National Historic Site staff to monitor use levels at the gravesite, and if neighborhood problems pertaining to visitor use were to arise, a shuttle program would be instituted (NPS 1991).

To effectively manage a national park and plan for its future, a basic understanding of a park’s resources, values, and history is needed - a foundation for planning and management. A foundation document for John Muir National Historic Site is being completed at time of publication. Therefore the park purpose and park significance statements below are in draft form.

**Draft Purpose.** John Muir National Historic Site preserves and protects the home and portions of the Alhambra Valley agricultural estate where John Muir lived, worked, and is buried, to memorialize and connect people with Muir’s global legacy as an influential naturalist, writer, and champion for protecting national parks and wild lands.

**Draft Significance.** Several significance statements have been drafted for John Muir NHS; the following significance statement specifically pertains to the gravesite. (NOTE: The definition of “significance” for the Foundation Document should not be confused with the NEPA definition of significance.)

- John Muir National Historic Site includes the final resting place of John Muir in the Strentzel family gravesite, which, as a pilgrimage site, served as a catalyst for the designation of the park.
ISSUES AND CONCERNS ADDRESSED IN THIS DOCUMENT

From March 6 to June 30, 2013, public scoping was conducted by the NPS as part of the early development of the Strentzel-Muir Gravesite Plan. Twenty-one scoping letters were received from members of the Muir family, gravesite neighbors, park partners, local non-profit organizations, university professors, and individual members of the public. The following table summarizes all public comments that were received in the planning process and/or addressed in this document.

Table 1. Issues and Concerns Addressed in This Document

<table>
<thead>
<tr>
<th>Importance of Gravesite</th>
<th></th>

<td>NPS needs to be careful when stabilizing creek to ensure they don’t negatively impact neighbors’ creek banks.</td>
</tr>
<tr>
<td></td>
<td>NPS needs to stabilize creek bank and control erosion to ensure gravesite doesn’t erode.</td>
</tr>
<tr>
<td>Riparian Habitat and Natural Resources</td>
<td>Evaluate the environmental impacts to Alhambra Creek from increased visitor use and from potential construction of new facilities on site.</td>
</tr>
<tr>
<td></td>
<td>Enhance riparian habitat by eliminating invasive vegetation and by planting native vegetation.</td>
</tr>
<tr>
<td>Safety</td>
<td>Consider providing signs to warn visitors of the dangers of creek and eucalyptus’ falling limbs.</td>
</tr>
</tbody>
</table>

**ISSUES AND CONCERNS BEYOND THE SCOPE OF THIS PROJECT**

The following issues and concerns were considered out of scope of this project because the issue or suggestion does not directly address the purpose and need for the plan. These ideas are valid and the NPS will continue to be willing partners with the City of Martinez, Contra Costa County, and the neighboring landowners on matters of mutual interest.

- NPS should add gates on public roads in City of Martinez or Contra Costa County jurisdiction such as Sheridan Lane, Wanda Way, and Jose Lane to restrict vehicular access to gravesite to address neighbors’ concerns.

- NPS should establish a gated “John Muir Heritage Neighborhood” overlaying Sheridan Lane, Strentzel Lane, Jose Lane and Wanda Way to increase property values for home-owners, mitigating effects of increased visitation at the gravesite.

- NPS should provide pedestrian linkages from Mt. Wanda to Briones Regional Park by building a pedestrian bridge across Alhambra Creek at Sequoia and Deodora Way.

- NPS should provide parking at the City of Martinez John Muir Memorial Park, allowing people to walk to gravesite only (not drive).
CHAPTER 2 : ALTERNATIVES

INTRODUCTION

The NPS has used input from public scoping, public and internal workshops, and data provided by the plan’s interdisciplinary team to develop a range of reasonable and feasible action alternatives that meet the plan’s purpose and need. Both action alternatives are consistent with the legal requirements, established standards and guidelines for the management of natural and historic resources in accordance with the mission of the NPS. A comparison of the No Action and both Action Alternatives is provided in Table 4 at the end of this chapter.

ALTERNATIVE 1: NO ACTION ALTERNATIVE

Under this alternative, the gravesite parcel would not be altered except through the continued preservation of historic resources such as the grave markers, the historic orchard, and other historic vegetation. Periodic mowing, litter and/or graffiti removal would also occur as needed. The Alhambra Creek stream-profile would be regularly monitored and if changes to the creek profile indicated a threat to the gravesite, appropriate action to protect the gravesite would be undertaken (following required environmental analysis and review).

In terms of visitor use of the gravesite, the NPS would not disclose the location of the gravesite in any form (website, printed media, or verbally). Although university, local groups and organizations, and Muir-Hanna family field trips would likely occur, they would not be managed by the NPS in any way, nor would public NPS tours to the gravesite occur with the rare exception of site visits with dignitaries led by park management. Because no information would be provided by the NPS, there would be a lack of clarity regarding whether visitors are allowed on site and a lack of clarity regarding how to get to the site and where to park. Also due to lack of management, the gravesite would appear to the average visitor to be open all the time, 24-hours a day, 7-days a week.

It is anticipated that the location of the gravesite would become better known through unaffiliated websites, through release of this EA, and by word-of-mouth; all of which could contribute to increased visitation over time. Under the No Action Alternative, the NPS would not control, monitor, or limit neighbors or the general public from visiting the site except during times of official park closure (after sunset-before sunrise). In regards to law enforcement, the NPS has proprietary jurisdiction, which extends jurisdiction of the City of Martinez Police Department and the Contra Costa County Sheriff’s Department onto John Muir National Historic Site property. If there is a law enforcement issue during daylight hours, or prohibited use of the gravesite during nighttime hours, city or county law enforcement would be called by neighbors or the NPS to respond. Currently visitors drive and park along Sheridan Lane, Wanda Way, and Strentzel Lane searching for the gravesite, asking the gravesite’s neighbors for directions. It is anticipated that this practice would increase over time as the general location of the gravesite becomes better known.

All existing rights of way and utility easements would remain in the No Action Alternative. The NPS would continue working with the property owners of the 40-foot wide gravesite entrance right of way on Strentzel Lane, to ensure that the width of the road remains accessible to all park, fire, and utility vehicles. The gravesite property would remain fenced and delineated on the north boundary only, and the NPS would continue working with the neighbors to the north on appropriate screening vegetation. There would be no boundary delineation along the creek, or between the gravesite parcel and the property to the south and west. This results in pedestrian access from Strentzel Lane, across Alhambra Creek, to Wanda Way. It would also allow for encroachment activities from neighboring properties onto the gravesite property.
Figure 3. Alternative 1: No Action Alternative
CHAPTER 2: ALTERNATIVES

FEATURES COMMON TO BOTH ACTION ALTERNATIVES

Preservation of Historic Resources
The gravesite’s historic setting and features that contribute to the significance of John Muir National Historic Site, such as the grave markers, historic orchard, and specimen trees would be preserved in both Action Alternatives. All facilities added to the site would be designed and sited in a manner that is compatible with the historic landscape. Non-contributing, incompatible vegetation and other elements would be removed, ensuring that the existing rural character is retained.

Visitor Experience—Access
Both Action Alternatives would encourage the sense of reverence for Muir’s life and legacy as the primary desired visitor experience at the gravesite, which would be ensured through the preservation of the historic landscape and through limiting group sizes and duration of stay. In both action alternatives, the NPS would actively manage visitor use at the gravesite by providing information via the park website, at the visitor center, and by providing a set number of ranger-led shuttles to the site (number varies across alternatives). Rules regarding how to access the site, when the site is open, and details regarding the gravesite’s constraints within a quiet single-family residential neighborhood would be readily available. Pedestrians and cyclists would have unlimited access during daylight hours, but through regulatory and interpretive signage, they too would be encouraged to respect the solemn, reverential character of the site. Special tours with universities, non-profit organizations, and other groups would be allowed on a case by case basis. In both Action Alternatives, the Muir family would continue to have open access, and would also have the right to hold an annual, private, family commemoration at the gravesite—closed to the general public. Individuals or groups could request special use permits for activities at the gravesite. These special requests would be managed on a case by case basis, as they currently are for the rest of John Muir National Historic Site, and would be accepted if determined appropriate to the site and protective of the resources and site character. A few NPS-hosted special events could occur at the gravesite each year: for the annual Birthday/Earth Day celebration in April, the NPS could provide continual shuttle service from the house site to the gravesite and back, throughout the day; the NPS could also host a commemoration event at the gravesite for the public in December, marking Muir’s passing.

Visitor Experience—Facilities
In both Action Alternatives, a limited set of amenities would be installed at the gravesite to ensure that visitor access is managed in a way that protects resources and neighbors’ privacy and property while providing the desired visitor experience. Both alternatives include a short driveway and parking areas (varying in size across alternatives). The surface of the driveway would be compressed gravel, decomposed granite or like material—compatible with the historic setting. The accessible parking space(s) would be surfaced in a material compatible with the cultural landscape, while meeting the “firm and stable” requirements defined in the Architectural Barriers Act Accessibility Standards, 2004 as amended (ABAAS). Both alternatives include the installation of universally accessible footpaths leading from the parking area to the gravesite that would follow the Accessibility Guidelines for Outdoor Developed Areas, 2013 (AGODA). These footpaths would be 5-feet wide, and would be surfaced in compressed, decomposed granite or like material, compatible with the historic setting. The length of footpath varies between the two alternatives. Other amenities such as an entry-welcome sign, a regulatory sign with hours of operation and rules of behavior, and a bike rack would also be installed. Small informational signs that label historic vegetation could also be added. Both alternatives include the installation of boundary fencing along the southwest border, in collaboration with the adjacent landowner, although the type of fencing varies between the two alternatives. The contemporary wrought iron fence surrounding the grave markers would be maintained, and visitors (with the exception of the Muir family) would not have access to the interior of the wrought iron fence. Boundary screening vegetation would be replaced and/or maintained in both alternatives along the northern boundary, in collaboration with adjacent homeowners, to ensure compatibility with the historic landscape. No restrooms, picnic tables, or other amenities that encourage long lengths of stay would be installed. All of the above amenities would be designed to be compatible with the historic landscape, ensuring that the setting is preserved, and a reverential, quiet visitor experience is encouraged.
Natural Resources Management
Invasive exotic plant species such as English ivy and periwinkle would be controlled and native vegetation restored along the creek bank (in the riparian zone) in both action alternatives. Both Action Alternatives would also provide for continued, regular monitoring for potential changes to the stream profile and bank stability of Alhambra Creek along the gravesite.

Human Health and Safety
Historic trees would be periodically pruned and footpaths would be routed away from the fall zone of dangerous limbs. Visitors would likewise be routed away from the creek bank and native poison-oak; poison-oak could be identified in the field with a small sign to further ensure visitors do not come in contact with it. The gravesite would be closed to visitation after sunset until sunrise; hours would be posted on a regulatory sign at the gravesite entrance. If people access the site after hours, neighbors and/or the NPS could contact the Martinez Police Department or Contra Costa County Sheriff’s Department to handle the disturbance.

Land Use
The 1.27-acre gravesite parcel is located in Alhambra Valley just outside and southeast of the City of Martinez. Although the city has proposed annexing Alhambra Valley, at the time of publication this area remains in unincorporated Contra Costa County. Land uses in the Alhambra Valley consist of single-family residential homes. Lots range in size from one-half acre to several acres. Residential roads are generally narrow, country lanes without sidewalks. Contra Costa County adopted the Alhambra Valley Specific Plan (1992), which directs the development densities and type of development within the valley. As specified in the plan, Alhambra Valley should remain a rural residential area which supports a low-density housing pattern and encourages the retention of existing agricultural activities and scenic attributes. Both alternatives in the Strentzel-Muir Gravesite Plan are compatible with the county’s specific plan (the No Action alternative is also compatible with the specific plan).

Rights-of-Way and Easements
To access the gravesite, the National Park Service obtained a legal easement along the adjacent neighbor’s driveway (part of Strentzel Lane). The easement is defined as 40-feet wide and 170-feet long. Currently there are young olive trees and other vegetation within the 40-foot wide easement, narrowing the navigable area to approximately 14-feet wide. In addition to the legal easement for visitor and staff access to the site, there are utility easements that pass through the gravesite parcel. These include a Contra Costa County storm drain easement that drains into Alhambra Creek, a Contra Costa County sewer main easement that parallels the storm drain then passes under Alhambra Creek, and a Pacific Gas and Electric above-ground power line easement that parallels the sewer and storm drain along the northern boundary of the gravesite. Several neighboring homeowners also have access easements to their property along the same utility easement at the north edge of the property. All existing rights of way and easements would remain in both action alternatives as well as the no action. The NPS would continue working with the property owners of the 40-foot wide, 170-foot long gravesite entrance right of way on Strentzel Lane, to ensure that the width of the road remains accessible to all park, fire, and utility vehicles. All utility easements and access easements passing through the gravesite parcel would also remain.

ALTERNATIVE 2: PREFERRED ALTERNATIVE

Under Alternative 2, visitors would be able to access the site by walking, cycling, or by accessible park shuttle only. No privately-owned vehicles would be allowed, with the exception of private vehicles for visitors with severe disabilities who are unable to safely use the park shuttle—in this instance private vehicles would park in the shuttle turnaround area. Under the park’s current and foreseeable funding and staffing, John Muir National Historic Site would be able to accommodate up to two tours during the work week (Monday through Friday) and two tours on weekends using the existing accessible park shuttle fleet (fleet ranging in capacity from 4 visitors to 25 visitors). It is anticipated that this would result in tours being offered to 24–50 visitors per week, pending visitor demand (refer to Table 2). In the event that John Muir National Historic Site receives additional
funding to bolster staffing and, if warranted by visitor demand, tours could be increased to one per day, resulting in tours being offered to a maximum of 175 visitors per week. This maximum number of tours is unlikely to occur in the foreseeable future due to projected NPS funding allocations. The anticipated NPS tour visitation per week in Alternative 2 is therefore 24-50 individuals.

</tbody>
</table>

**ANTICIPATED = 24-50 MAXIMUM = 175**

In terms of visitor facilities, in addition to those mentioned above in *Features Common to Both Action Alternatives*, this alternative would have an entry gate with locking mechanism that would prohibit private vehicles from accessing the site, while allowing pedestrians and cyclists to pass through. This alternative would also include one informational kiosk at the beginning of the accessible footpath. The footpath in Alternative 2 would be a “there-back”, natural-surfaced trail measuring 5-feet wide and approximately 260-feet long. The fence to be installed along the southwest border would be a low-profile style compatible with the historic landscape to minimize contemporary additions to the landscape while still providing clear delineation between John Muir National Historic Site land and private land.
Figure 4. Alternative 2: Preferred Alternative
ALTERNATIVE 3

The primary differentiation between the two Action Alternatives (Alternative 2 and Alternative 3) is in visitation to the gravesite, including modes of access, numbers of tours, and variation in facilities provided at the gravesite. Under Alternative 3, visitors would be able to access the site by walking and cycling, by private vehicle and by an accessible park shuttle. Two private vehicle parking spaces would be installed, one of which would be van accessible. It is anticipated that on average, five vehicles containing three people would visit the gravesite each day, totaling approximately 105 visitors per week. Additionally, under the park’s current and foreseeable funding and staffing, John Muir National Historic Site would choose to accommodate up to two tours on weekends using the existing accessible park shuttle fleet (fleet ranging in capacity from 4 visitors to 25 visitors). It is anticipated that this would result in tours being offered to 20-30 visitors per week, pending visitor demand (refer to Table 3). In the event that John Muir National Historic Site receives additional funding to bolster staffing and, if warranted by visitor demand, tours could be increased to one per day, resulting in tours being offered to a maximum of 175 visitors per week. This maximum number of tours is unlikely to occur in the foreseeable future due to projected NPS funding allocations. The anticipated combined private vehicle and NPS tour visitation per week is therefore 125-135 individuals.

|                                | Anticipated = 125-135 | Maximum = 280                      |

In addition to the facilities mentioned above in Features Common to Both Action Alternatives, this alternative includes the addition of two interpretive wayside exhibits, two benches, and a raccoon-proof trash bin. The accessible footpath in Alternative 3 would be a loop, natural-surfaced trail measuring 5-feet wide and approximately 550-feet long. A mid-height, wooden fence would be installed along the southwest border to provide visual and physical boundaries between the National Historic Site property and private land. In addition, a low-profile style fence, compatible with the historic landscape would be installed to further inhibit visitors from accessing the creek and impacting riparian vegetation.
Figure 5. Alternative 3
POTENTIAL OPTIONS CONSIDERED BUT DISMISSED

Relocate Burials and Grave markers to House Site or Adding Replica Grave Markers to House Site

During the course of public scoping, the suggestion to relocate the grave markers to the house site or to create replica grave markers at the house site was made. The cited benefit would be to provide the NPS the opportunity to close the actual gravesite to visitation, thereby entirely eliminating neighbor/visitor conflicts. The NPS rejected the idea of relocating the burials and historic grave markers because the action would have an adverse effect on the historic property as defined in Section 106 of the National Historic Preservation Act. The action would permanently negatively impact one of the park’s fundamental resources, and would be prohibited given our legislative charge to “preserve the site in its present undeveloped condition.” (102 Stat. 2830). The idea of adding replica grave markers to the house site, while preserving the actual gravesite, is also infeasible because installing non-historic features to the John Muir National Historic Landmark would have an unacceptable adverse effect on the historic property.

Protect Gravesite by not Allowing any Visitation

A related concept was also offered during scoping meetings: a proposal to fence the entire gravesite parcel in order to prevent all public visitation. This concept was rejected because it would contradict the intent of the Muir-Hanna Family Trust, the American Land Conservancy, and the NPS when they came together to hand over the gravesite parcel to the NPS in 2000. Records indicate as early as 1971 that the Muir-Hanna Family Trust approached the NPS to add the gravesite parcel to John Muir National Historic Site in order for the NPS to provide “perpetual care and develop a suitable small park area in keeping with the restoration of the John Muir National Historic Site.” (Letter from Sherry Hanna to park Superintendent, 9/18/74). Providing visitation to the gravesite was one of the reasons why the NPS was chosen as the beneficiary of this land. Additionally the NPS Organic Act (54 U.S.C. 100101) cited in the John Muir National Historic Site enabling legislation of 1964 (78 Stat. 753) mandates that national parks, publicly-owned lands, are set aside in part for the enjoyment of future generations (the public who owns them)—therefore making this proposal infeasible.

</table>
### Cultural Resources
- Retention of non-contributing vegetation
- Retention of existing screening vegetation on north boundary
- Preservation and maintenance of cultural landscape features
- Access to grave markers (within wrought iron fence) given to Muir/Hanna family and NPS staff only

### Natural Resources
- Minimal management of non-historic invasive and native vegetation
- Invasive vegetation removed
- Native vegetation planted in riparian zone

### Human Health and Safety
- Public discouraged from visiting
- Visitors can access Alhambra Creek along riprapped bank
- Storm drain culvert outfall accessible by pedestrians
- Historic trees would be maintained to minimize falling limbs
- Native poison-oak along creekbank would be encountered by visitors
- Periodic after-hours parties, excessive noise, and littering
- Contra Costa County and City of Martinez would provide law enforcement and fire protection
- Visitors would find safety information and rules of behavior available on website, at visitor center, and at gravesite
- Riparian vegetation would be planted to naturally fence off creek bank and storm drain culvert from pedestrian access
- Historic trees would be maintained to minimize falling limbs; visitor facilities would be sited away from dangerous overhanging limbs
- Native poison-oak could be identified with small sign
- Entry gate with locking mechanism and more prevalent information regarding hours of operation and rules would lessen after-hours parties, noise and littering. NPS would have a 4 day/week presence, litter cleanup would occur more frequently
- Contra Costa County and City of Martinez would provide law enforcement and fire protection
- Visitors would find safety information and rules of behavior available on website, at visitor center, and at gravesite
- Riparian vegetation and low fence would be installed to fence off creek and storm drain culvert from pedestrian access
- Historic trees would be maintained to minimize falling limbs; visitor facilities would be sited away from dangerous overhanging limbs
- Native poison-oak could be identified with small sign
- More prevalent information regarding hours of operation and rules would lessen after-hours parties, noise and littering. NPS would have a 2 day/week presence, litter cleanup would occur more frequently
- Contra Costa County and City of Martinez would provide law enforcement and fire protection

**IMPACT SUMMARY**

**Table 5. Impact Summary**

<table>
<thead>
<tr>
<th>Impact Topic</th>
<th>Alternative 1: No Action</th>
<th>Alternative 2: Preferred</th>
<th>Alternative 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cultural Resources</td>
<td>The No Action Alternative would have a local, long-term minor, beneficial impact on cultural resources. Under this alternative there would be no plans to introduce new, non-historic features into the area, and there would be modest plans for preserving the site.</td>
<td>Alternative 2 would have a local, long-term, moderate, beneficial impact on cultural resources. Under this alternative a modest degree of historically-compatible improvements would be made to accommodate visitation together with a robust preservation program.</td>
<td>Alternative 3 would have a local, long-term, minor, beneficial impact on cultural resources. Under this alternative a moderate degree of historically-compatible improvements would be made to accommodate visitation together with a robust preservation program.</td>
</tr>
<tr>
<td>Natural Resources</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Physical Resources</td>
<td>The No Action Alternative would have direct, local, long-term, negligible, beneficial, impacts on physical resources. There would be no new impacts to soils. Continued monitoring of the stream channel would occur.</td>
<td>Alternatives 2 and 3 would have a direct, local, long-term, minor beneficial impact on physical resources. Construction of an accessible path, shuttle parking area, and boundary fence would cause some further disturbance over the short term. Restoration of native perennial vegetation with strong, deep roots would enhance soil stability around the riparian area providing protection of the creek bank. Installation of an accessible path would concentrate foot traffic, minimizing soil compaction throughout the site.</td>
<td></td>
</tr>
<tr>
<td>Biological Resources</td>
<td>Alternative 1 would have a direct, local, long-term minor adverse impact on biological resources. Current invasive plant removal efforts would be insufficient for reducing and containing invasive plant species, impacting the integrity of wildlife habitat and other ecological functions.</td>
<td>Alternatives 2 or 3 would have a local, long-term minor beneficial impact to biological resources. Alternatives 2 and 3 calls for increased efforts to remove invasive plants and restore native vegetation, particularly along the riparian corridor, which would enhance wildlife habitat and other ecological functions.</td>
<td></td>
</tr>
<tr>
<td>Social Resources</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Visitor Experience and Access</td>
<td>The No Action Alternative would result in a moderate, long-term, negative impact on visitor experience and access. There would be no change to visitor management in Alternative 1. Once on site, visitors would experience the peaceful cultural landscape setting among the historic orchard along Ahwahnee Creek, but existing impacts to visitor experience would continue. These would include: not providing visitors with information regarding location and access to the gravesite, lack of interpretive opportunities, lack of visitor amenities, lack of accessibility for visitors with disabilities, lack of clarity regarding whether visitors are allowed on site, lack of management resulting in no opening and closing hours, and inconvenience to neighbors due to uninformed visitors who request information from neighbors. Because the NPS would continue to not manage visitation, Alternative 1 would not provide an avenue for limiting visitation, which could result in visitation numbers that exceed desired limits.</td>
<td>Under Alternative 2, there would be a long-term, minor to moderate, beneficial impact to visitor experience and access due to the addition of ranger led tours, self-guided tours, and a wheelchair accessible, natural-surfaced path from the shuttle drop-off area to the grave markers. The experience would also be slightly improved with the addition of an informational entrance kiosk that is compatible with the historic setting. Although visitors would have to plan ahead if they plan to visit the site via NPS shuttle, the quality of the visit would be high. Through preservation of the cultural landscape, the NPS would continue to provide a peaceful, contemplative place of reverence. Establishing regular shuttle access (up to 4 times per week), and by allowing unlimited pedestrian and cyclist access during daylight hours, visitor access would be improved. A gate with locking mechanism would be installed at the entrance to the gravesite, ensuring that only authorized vehicles can enter the site. Once the gravesite access has been established and advertised to the public, it is anticipated that neighbors would no longer be relied upon by visitors to provide clarifying access and location information.</td>
<td>Under Alternative 3 there would be a long-term, major beneficial impact to visitor experience and access when compared to the No Action Alternative. This is due to the addition of two parking spaces (available to the public during daylight hours) and the addition of regular NPS shuttle access to the site from the John Muir visitor center (up to 2 times per week). Once the gravesite access has been established and advertised, it is anticipated that inconvenience to neighbors would stay the same as the no action alternative due to the ability for visitors to park at the site without an NPS escort—potentially contributing to the continuation of visitors driving around the narrow cul de sac seeking directions. Addition of directional signage on Sheridan and Strentzel Lanes should help mitigate this. The visitor experience would be improved due to the addition of ranger-led tours and a wheelchair accessible, natural-surfaced loop path from the shuttle drop-off to the grave markers. The experience would also be slightly improved with the addition of up to two interpretive waysides exhibits and up to two benches that are compatible with the historic setting. Through preservation of the cultural landscape, the NPS would continue to provide a peaceful, contemplative place of reverence.</td>
</tr>
<tr>
<td>Traffic / Circulation</td>
<td>The No Action Alternative would result in a long-term, minor, negative impact to traffic and circulation within the neighborhood. Traffic and circulation on Strentzel and Sheridan Lanes would remain the same: infrequent gravesite visitors driving to the gravesite would continue to be confused due to lack of directional signage. Drivers would continue relying on neighbors help to direct them to the gravesite. Because the NPS would continue not managing visitation to the gravesite, there is the potential for visitation and traffic to increase over time.</td>
<td>Implementation of Alternative 2 would have a long-term, minor beneficial impact to neighborhood traffic. By notifying the public that there is no onsite parking, it is anticipated that privately-owned vehicle traffic would decrease on Strentzel and Sheridan Lanes.</td>
<td>Implementation of Alternative 3 would likely have a long-term, negligible, beneficial impact on traffic and circulation when compared to the No Action Alternative. This alternative provides parking for two privately-owned vehicles; therefore visitors would continue driving on Strentzel and Sheridan Lanes. There could be reduced confusion and fewer “circling” drivers in the neighborhood because directional signs would be installed.</td>
</tr>
<tr>
<td>Impact Topic</td>
<td>Alternative 1: No Action</td>
<td>Alternative 2: Preferred</td>
<td>Alternative 3</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Human Health and Safety</td>
<td>Safety issues of uncontrolled access to the site, including access to the steep creek banks and stands of native poison-oak, and threats from falling limbs from the historic trees would continue, resulting in a long-term, negligible, adverse impact to human health and safety.</td>
<td>Implementation of Alternative 2 would result in long-term, minor, beneficial impact to human health and safety. Increasing riparian vegetation would deter visitors from accessing the creek bank and creek itself and help avoid contact with native poison-oak. Delineation of an accessible trail would encourage visitors to remain outside of the fall zone of the historic trees, away from ticks, and away from the native poison-oak.</td>
<td>Implementation of Alternative 3 would result in long-term, minor beneficial impacts to safety. Installation of fencing along the top of the creek bank would minimize existing hazards associated with scrambling down into Alhambra Creek. Installation of plant identification signs at the poison-oak brambles would help unknowing visitors avoid contact with this native plant. Installation of an accessible footpath and parking areas would minimize potential contact with ticks, and would keep visitors away from the historic and ornamental trees subject to limb failure.</td>
</tr>
<tr>
<td>Park Operations</td>
<td>The No Action Alternative would result in a long-term negligible impact to park operations. There would continue to be a lack of interpretive programs and materials at the site. Existing resources (gravesite, fruit trees and surrounding landscape and creekbank) would continue to be maintained on a cyclical basis, and would continue to be managed as funds and staffing allow. No changes would occur to existing administrative costs or workloads.</td>
<td>Alternative 2 would result in long-term, minor adverse impacts to park operations. Existing interpretive programming would need to shift throughout the park to accommodate interpretation at the gravesite. Installation of facilities such as footpaths and driveway to accommodate visitation would require additional annual and cyclic maintenance. There could be a slight increase in administrative workload associated with review and oversight of Special Park Uses permit activities. Resource management activities would increase slightly with active invasive plant removal and management.</td>
<td>Alternative 3 would result in local, minor to moderate adverse impacts to operations over the long term. Existing interpretive programming would need to shift throughout the park to accommodate interpretation at the gravesite. Installation of facilities such as waysides, benches, footpaths, driveway, and parking areas to accommodate visitation would require additional annual and cyclic maintenance. There could be a slight increase in administrative workload associated with review and oversight of Special Park Uses permit activities. Resource management activities would increase slightly with active invasive plant removal and management.</td>
</tr>
</tbody>
</table>
ENVIRONMENTALLY PREFERRED ALTERNATIVE

The Council on Environmental Quality Regulations implementing NEPA require the identification of the alternative which is considered to be environmentally preferable (Council on Environmental Quality Regulations, Section 1505.2). Ordinarily, this means the alternative that causes the least damage to the biological and physical environment; it also means the alternative that best protects, preserves, and enhances cultural and natural resources.

The National Park Service has determined that the environmentally preferred alternative for this project is Alternative 2 because fewer contemporary features would be added to the historic landscape, and increased restrictions on visitor access would result in greater protection of cultural and natural resources than either the No Action Alternative or Alternative 3.
CHAPTER 3 : AFFECTED ENVIRONMENT AND ENVIRONMENTAL CONSEQUENCES

INTRODUCTION

This section of the Strentzel-Muir Gravesite Plan Environmental Assessment describes the existing conditions (affected environment) and the potential impacts (environmental consequences) of each of the three alternatives (including the No Action Alternative) on each relevant resource topic. It is organized by impact topics, which allows a standardized comparison among alternatives, based on issues.

The resource descriptions provided in this chapter serve as a baseline with which to compare the potential effects of the actions considered in this EA. The Environmental Consequences portion of each impact topic analyzes both beneficial and adverse impacts that could result from implementing the alternatives described in Chapter 2. The analysis includes definitions of impact thresholds (negligible, minor, moderate, and major), methods used to analyze impacts, and the analysis methods used for determining cumulative impacts. A summary of the environmental consequences of each alternative is provided in Table 5 in Chapter 2: Alternatives.

IMPACT TOPICS CONSIDERED IN THIS PLAN

The following impact topics were identified during the public scoping process and by staff of John Muir National Historic Site. These topics are described and possible impacts to them are analyzed in this chapter.

- Cultural Resources
- Physical Resources
- Biological Resources
- Visitor Experience and Access
- Traffic and Circulation
- Park Operations
- Human Health and Safety

ENVIRONMENTAL CONSEQUENCES METHODOLOGY

General Methods of Impact Analysis

The NPS based the impact analyses and conclusions on scientific literature; information and insights provided by NPS experts, other agencies, the public, and best professional judgment.

For each impact topic, direct and indirect impacts are defined in terms of thresholds of effect, context, intensity, duration, and timing. Impacts and cumulative effects are discussed in each impact topic. Definitions of intensity levels vary by impact topic. Where it is not specifically stated otherwise under each impact topic, the following definitions apply.

Type: Describes the classification of impacts as:
- **Beneficial**: A positive change in the condition or appearance of the resource, or a change that moves the resource toward a desired condition.
- **Adverse**: A change that moves the resource away from a desired condition or detracts from its appearance or condition.
- **Direct Impact**: An effect that is caused by an action and occurs at the same time and place as the action.
- **Indirect Impact**: An effect that is caused by the action and occurs later or farther away, but is still reasonably foreseeable.
CHAPTER 3: AFFECTED ENVIRONMENT AND ENVIRONMENTAL CONSEQUENCES

**Intensity:** Describes the degree, level, or strength of an impact as negligible, minor, moderate, or major. Intensity is defined individually for each impact topic.

**Duration:** Describes the length of time an effect would last, either short-term or long-term.
- **Short-term** impacts are temporary, transitional, or construction-related impacts and the resources generally resume their pre-construction conditions following construction.
- **Long-term** impacts last beyond the construction period, and the resources may not resume their pre-construction conditions for a longer period following construction.

**Context:** Context is the setting within which an impact would occur.
- **Local impacts** would generally occur within the immediate vicinity of the proposed project.
- **Regional impacts** would occur on surrounding lands and/or in adjacent communities.

**CUMULATIVE IMPACTS**

The Council on Environmental Quality (CEQ) regulations for implementing NEPA require the assessment of cumulative impacts in the decision-making process for federal actions. A cumulative impact is described in the CEQ Regulation 1508.7, as, “the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time.”

Cumulative impacts are considered for both the No Action and Action alternatives; they were determined by combining the impacts of the alternative with other past, present, and reasonably foreseeable future actions with the effects of the alternatives. The following table lists actions that could result in cumulative impacts.

**Table 6. Past, Present, and Future Projects Pertaining to Gravesite**

CULTURAL RESOURCES

Affected Environment

Overall Historic Character of the Strentzel-Muir Gravesite
Although the 1.27 acres comprising today's Strentzel-Muir Gravesite were held successively by Karkin Ohlone Indians, Spanish colonial missions, and the family of Don Ignacio Martinez prior to the Strentzel-Muir family, there are no historic features today that carry associations with these earlier land holders. In contrast, the gravesite area includes many features that carry associations with the ownership of the land by the Strentzel-Muir family. Identification of the existing features, and determinations about what features are historic and thus contribute to the historic character of the Strentzel-Muir Gravesite and the larger John Muir National Historic Site including the Muir Home Site and Mt. Wanda, are documented in two reports, the John Muir National Historic Site Cultural Landscape Inventory (2004) and the John Muir National Historic Site Cultural Landscape Report (2005). According to these reports, the Strentzel-Muir Gravesite, though now encompassed within a suburban neighborhood, maintains a rural, serene feel in its creek-side setting, much like it did historically. Though historic garden plantings are gone, the relic pear orchard, specimen trees, and family burial plot still make the site a rare vestige of the Alhambra Valley of the 1800s. The Strentzel-Muir Gravesite parcel in its entirety is a contributing historic locale within the John Muir National Historic Site. The following is a compilation of all the existing features at the gravesite with an indication of whether they contribute to the significance of the historic property.

Cultural Landscape Resources

Figure 6. Parking area and entrance: non-contributing

The parking area and entrance that form the end of Strentzel Lane as it joins the gravesite area were not present during the historic period (1849-1914) and are not historic. Historically, this area was planted and maintained as orchard land by Strentzel and Muir. Strentzel Lane was laid out in the 1960s when the orchard lands were subdivided and sold.
The gravesite area was the southern-most portion of a 12-acre parcel that Dr. John Strentzel purchased in 1853 and planted to pears not long after. John Muir assumed responsibility for these trees in 1881, at the point when he became ranch manager. Today, the orchard is comprised of a mixture of historic pears, the most accessible historic-period trees in the park, and replacement pear trees that have been planted in such a manner as to restore a remnant of the historic planting arrangement.

In addition to planting pears, Strentzel also planted eucalyptus and incense-cedars in the gravesite area. Muir referred to a eucalyptus tree, probably this one, as a guardian angel watching over the family graves. In 1914, Muir’s funeral service was held under the tree’s broad branches.
Figure 9. Incense-cedar, Blue Gum eucalyptus, and California Bay-Laurel: treated as contributing for this planning effort

Together with the eucalyptus described above, these trees form a row that may have served as the marker of the southern boundary of the 12-acre pear orchard.

Figure 10. Riparian vegetation: non-contributing

Strentzel and Muir family diaries indicate that John Muir and family maintained and attempted to enhance native riparian vegetation, burning brush along the creek, and planting buckeyes, elderberry and willow. Today, the riparian corridor is a mixture of native and non-native vegetation.
Figure 11. Non-native vegetation near grave markers (Ponderosa pine, eucalyptus, hawthorn, incense-cedar, coast redwood, periwinkle): non-contributing

Plantings around the grave markers appear to have been garden-like during the period of significance, including rambling roses, bulbs, a variety of other plants and grass around the graves. The current mix of non-native vegetation in this area does not appear to bear resemblance to the historic plantings, and is considered non-contributing.

Figure 12. North and west boundary vegetation: non-contributing

Vegetation appearing at the north and west boundaries of the gravesite area appears to have been planted ca. 1960, around the time when the orchard lands were sub-divided. It is non-contributing and incompatible with the historic scene.
The family gravesite was formally set out in 1890, at the death of Dr. John Strentzel, although it may have been established as early as 1857, when the Strentzels’ only son, John Erwin, died. The family monument is an obelisk that sits upon a two-tiered base, all in granite. On it are inscribed the names of Strentzel, his wife Louisiana, and their son, John Erwin.

Three Raymond granite markers (quarry from the Sierra foothills near Yosemite) headstones carry the names Johnnie (John Erwin), Lottie (the Strentzels’ daughter and sister of Louie, Muir’s wife), and Uncle Henry (brother of Dr. John Strentzel).
Figure 15. Granite cope (enclosure): contributing

Of Raymond granite, the cope surrounds the family burial ground and is interrupted by a four-foot wide, stepped entry-way on the west side.

Figure 16. John and Louie Strentzel Muir grave markers: contributing

Black Academy granite markers (quarry from the Sierra foothills near Fresno) sit upon Raymond granite bases and mark the burial places of the pair.
Figure 17. Hanna family grave markers (Wanda Muir Hanna and Tom Hanna): contributing

Two granite markers indicate the burial place of Wanda Muir Hanna, the Muirs’ oldest daughter and her husband, Tom Hanna.

Figure 18. Picket fence and gate: non-contributing

John Hanna, son of Wanda and Tom Hanna, constructed a cyclone fence around the family burial plot in the 1960s to protect the site from vandalism. That fence was replaced sometime after 1993 with this iron picket fence, constructed by the American Land Conservancy.
**Archeological Resources**

As stated earlier, no above-ground features carrying associations with any of the earlier land holders (Karkin Ohlone, Spanish colonials and Martinez family) exist at the site today. Before drawing the conclusion that there are no historic properties or cultural resources associated with these past land holders at the Strentzel-Muir Gravesite, however, the NPS had to consider if archeological properties existed at the site that were associated with any of them.

In order to do this the NPS undertook three tasks. One, we submitted an information request to the California Historical Resources Information System, Northwest Office, the state’s official repository of historic property records, learning from that Office that there are no archeological sites of any kind at the site. Two, we submitted an information request to the California Native American Heritage Commission, learning from that Office that there are no Native American sacred sites. Three, NPS archeologists undertook an archeological surface survey of the Strentzel-Muir Gravesite, walking the area in 10-meter transects, carefully examining the entire ground surface in the process. This field survey revealed no archeological sites or objects on the ground surface related to the early land holders of the gravesite area.

As a result of these efforts, we have concluded that there is no evidence of archeological deposits at the Strentzel-Muir Gravesite associated with Karkin Ohlone, Spanish colonial and Martinez family ownership of the area. There is the possibility that archeological deposits associated with these landowners exist beneath the ground surface, but we determined that sub-surface investigation was not warranted by the documentary and field information available.

As already demonstrated, the Strentzel-Muir Gravesite embodies rich associations with the Strentzel-Muir period of land ownership. Despite these associations, our archeological research efforts also yielded no evidence of Strentzel-Muir archeological deposits in the area.

**Cultural Resources Environmental Consequences**

*Methodology*

The tables below define the range of potential NEPA impact findings and the methodology for arriving at those impact findings for cultural resources. The NEPA impact findings presented below for the three alternatives were arrived at by employing the methodology described in these tables.

</table>
The following sections describe and document the environmental consequences that the three alternatives under consideration would have upon the cultural resources at the Strentzel-Muir Gravesite. As previously stated, determinations about what features are historic and thus contribute to the historic character of the Strentzel-Muir Gravesite were documented in two reports, the *John Muir National Historic Site Cultural Landscape Inventory* (2004) and the *John Muir National Historic Site Cultural Landscape Report* (2005). In 2004, the California State Historic Preservation Office (SHPO) concurred with the NPS Cultural Landscape Inventory findings concerning what features are historic and thus contribute to the significance of the National Historic Site. These are the properties that comprise the cultural resources Affected Environment. In addition to further documenting the historic landscape, the *Cultural Landscape Report* established recommendations for the treatment of the landscape throughout the park, including at the gravesite. In 2005 the SHPO reviewed these recommended treatments and concurred with the NPS conclusion that implementation of the treatments would not adversely affect John Muir National Historic Site.

The following actions summarize the major recommended treatments for the Strentzel-Muir Gravesite described in the *Cultural Landscape Report*:

- Overall, maintain the serenity and rural feel of the area.
- If the site is opened to visitation, then the informal access and parking area that spurs off of Strentzel Lane should be improved in a compatible way.
- A survey should be conducted to establish the boundary of the Strentzel-Muir Gravesite area, and a compatible fence delineating the boundary should be installed.
- Existing historic vegetation should be preserved, and missing historic vegetation should be re-introduced to enhance the historic appearance of the area.
- The remnant pear orchard should be preserved and the grid pattern of the historic orchard should be restored through the replanting of new pear trees matching the historic trees.
- Eucalyptus and other historic specimen trees should be preserved.
- Gravesite markers should be preserved.
- Alhambra Creek should be monitored and kept stable, and the riparian zone should be maintained and enhanced as a native vegetation area.
- If constructed with materials that are compatible with the historic scene, an access trail from the parking area to the burial plot, though not preferred, would be acceptable.

These recommendations have been included in this part of the EA to serve as a set of benchmarks to assist in measuring the impacts of the various actions being proposed.

*Environmental Consequences – No Action Alternative*

**Cultural Landscape**

- **Circulation** – During its period of historic significance (1849-1914), the Strentzel-Muir Gravesite did not include any circulation features—roads, trails or paths. The site today remains free of circulation features except for an informal, unpaved road spur and parking area that connects Strentzel Lane with the pear orchard and burial plot that comprise the gravesite. This road spur and parking area is not historic and thus does not contribute to the historic character of the area. In fact, as a visual intrusion on the edge of the historic scene, it detracts a small measure of the area’s vegetated character. Under the no action alternative, which would continue the practice of not allowing visitation to the Strentzel-Muir Gravesite, the road spur and parking area would remain as is and serve solely as an area for NPS service vehicle parking. While the NPS did not construct this non-historic feature, its deliberate decision to leave the road spur and parking area in place under the No Action Alternative would have a small negative effect on the gravesite area. In NEPA terms, the impact would be direct, local, minor, adverse and long-term.
Vegetation – The treatment of vegetation under the No Action Alternative would largely follow the 2005 Cultural Landscape Report recommendations. Consistent with these recommendations, historic vegetation would be maintained and preserved. This would include preservation and enhancement of the pear orchard and preservation of specimen trees. Also consistent with the recommendations, select non-historic vegetation would be removed, riparian vegetation would be maintained and enhanced, and missing historic vegetation would be replaced in kind, but not to the extent in this alternative when compared to the other two alternatives. The impacts would be direct, local, minor, beneficial and long-term.

Structures – The historic grave markers would be maintained and preserved under this alternative. Additionally, the non-historic fence enclosure around the burial plot, which was deemed compatible with the historic scene in the Cultural Landscape Report, would be maintained and preserved. These treatments are consistent with the 2005 recommendations. The impacts would be direct, local, moderate, beneficial and long-term.

Introduction of non-historic features to the gravesite area – Under this alternative there are no plans to introduce new, non-historic features into the area, therefore there would be no impact.

Archeology

As described in the Affected Environment section, research and field investigations have revealed no archeological resources at the Strentzel-Muir Gravesite. Ground-disturbing activities under this alternative would be minimal, and when they occur would be overseen by an archeological monitor. The NEPA finding is no impact to archeological resources.

Overall Environmental Consequences for the No Action Alternative

Overall, the No Action Alternative would affect the Strentzel-Muir Gravesite cultural landscape and archeological resources through a number of actions that the NPS would implement at the site. Considered together, the overall effect of these actions would be direct, local, minor, beneficial and long-term.

Cumulative Impact for the No Action Alternative

When the impact of the No Action Alternative on cultural resources is considered together with the present and potential impacts of the nearby projects listed in Table 6 in this chapter, the impact finding is unchanged. The projects listed in Table 6 have had (or would have) negligible impact on cultural resources. Therefore, the cumulative impacts on cultural resources at the gravesite due to the No Action Alternative in combination with the projects listed in Table 6 would be direct, local, minor, beneficial, and long-term.

Environmental Consequences – Alternative 2

Cultural Landscape

Circulation – Under this alternative, which would allow pedestrian, bicycle and NPS shuttle-led visitation, the non-contributing informal road spur and parking area would be redesigned as a compatible park entrance at this small, serene location. In order to accommodate one NPS service vehicle parking space and one NPS visitor shuttle parking space and turn-around area, the road spur would be lengthened and reconfigured. Its surface would be upgraded from compacted earth to decomposed granite or some similar natural material. In addition to this redesigned road spur and parking area, a new 5-foot wide accessible trail, also of natural material, would run out and back through the historic orchard, joining the parking area and the Muir family burial plot. This improved road spur, parking area and trail would detract from the historic scene by converting the ground that it covers...
from a weedy, annual grass mix to a paved surface. In assessing the environmental consequence of these circulation changes on the historic landscape it is important to recall that the 2005 Cultural Landscape Report recommendations called for these types of improvements, although it should be noted that a trail was deemed acceptable but not preferred in the report. Further, the majority of the area that would be converted from grass cover to natural paving is currently a compacted-earth utility corridor, the character of which is more weedy and disturbed than meadow-like. Accordingly, as the visitor arrival area improvements would be mitigated by the use of natural, compatible materials as well as the development of an overall design that would enhance the vegetated appearance and feel of the rural landscape, the impacts on historic circulation would be direct, local, minor, adverse and long-term.

- **Vegetation** – The treatment of vegetation under this alternative would be consistent with the 2005 Cultural Landscape Report recommendations. In line with these recommendations, historic vegetation would be maintained and preserved. This would include preservation and enhancement of the pear orchard and preservation of specimen trees. Also consistent with the recommendations, select non-historic vegetation would be removed, riparian vegetation would be maintained and enhanced, and missing historic vegetation would be replaced in kind. Under this alternative, non-historic border screening vegetation would be replaced with vegetation that is more compatible with the character of the area, with the promise of enhancing the historic appearance and feel of the area. The impacts on historic vegetation would be direct, local, moderate, beneficial and long-term.

- **Structures** – Environmental consequences are the same for this alternative as they are for the No Action Alternative.

- **Introduction of non-historic features to the gravesite area** – As discussed in the Circulation section, in order to accommodate pedestrian, bicycle and NPS shuttle-led visitation, this alternative would improve the existing road spur and parking area and introduce a trail that would connect the parking area with the family burial plot. In addition to the circulation changes, this alternative also would introduce a minimum level of amenities and furnishings to the site. Where the improved road spur and Strentzel Lane join, an NPS gate with locking mechanism would replace the current post/chain gate to prohibit unauthorized vehicle entry. Near this location, bike parking would be accommodated through installation of a bike rack. Adjacent to the parking area, a kiosk would welcome visitors to the site and provide park information. Fences, compatibly designed and low-profile, would demarcate the boundaries between NPS and neighbor properties and prohibit visitors from entering sensitive native habitat areas. Because they are minimal in number, would be designed to be compatible with the site and would be balanced by design measures that would enhance the historic character of the area, the impacts to the cultural landscape would be direct, local, minor, adverse and long-term.

**Archeology**

Environmental consequences are the same for this alternative as they are for the No Action Alternative. There would be no impact to archeological resources.

**Overall Environmental Consequences for Alternative 2**

Overall, as described above, Alternative 2 would affect the Strentzel-Muir Gravesite cultural landscape and archeological resources through a number of actions that the NPS would implement at the site. Considered together the overall effect of these actions on cultural resources would be direct, local, moderate, beneficial and long-term.
Cumulative Impact for Alternative 2

When the impact of Alternative 2 on cultural resources is considered together with the present and potential impacts of the nearby projects listed in Table 6 in this chapter, the impact findings are unchanged. The projects listed in Table 6 have had (or would have) negligible impact on cultural resources. Therefore, the cumulative impacts on cultural resources at the gravesite due to Alternative 2 in combination with the projects listed in Table 6 would be direct, local, moderate, beneficial, and long-term.

Environmental Consequences – Alternative 3

Cultural Landscape

Circulation – Under this alternative, where pedestrian, bicycle, private vehicle and NPS-led shuttle visitation would be allowed, the non-contributing informal road spur and parking area would be redesigned as a compatible park entrance at this small, serene location. In order to accommodate one standard visitor parking space, one van-accessible visitor parking space and one NPS visitor shuttle parking space and turn-around area, the road spur would be lengthened and reconfigured, with its footprint being slightly larger than in Alternative 2. Its surface would again be upgraded from compacted earth to decomposed granite or similar natural material. In addition to this redesigned road spur and parking area, a new 5-foot wide accessible trail, also of natural material, would connect the parking area and the Strentzel-Muir burial plot. The trail in this alternative would be a loop, not an out and back. As with Alternative 2, this alternative would detract from the vegetated character of the area, intruding just a little bit more into the historic scene and converting the ground that it covers from a weedy, annual grass mix to a paved surface. In assessing the environmental consequence of these circulation changes on the historic landscape it is again important to recall that the 2005 Cultural Landscape Report recommendations called for these types of improvements, although it should be noted that a trail was deemed acceptable but not preferred in the report. Further, the majority of the area that would be converted from grass cover to natural paving is currently a compacted-earth utility corridor, the character of which is more weedy and disturbed than meadow-like. Accordingly, as their introduction into the area would be mitigated by the use of natural, compatible materials as well as the development of an overall design that would enhance the vegetated appearance and feel of the rural landscape, the impacts to historic circulation would be direct local, minor, adverse and long-term.

Vegetation – The treatment of vegetation under this alternative would be consistent with the 2005 Cultural Landscape Report recommendations. Historic vegetation would be maintained and preserved including preservation and enhancement of the pear orchard and preservation of specimen trees. Also consistent with the recommendations, select non-historic vegetation would be removed, riparian vegetation would be maintained and enhanced, and missing historic vegetation would be replaced in kind. Under this alternative, non-historic border screening vegetation would be replaced with vegetation that is more compatible with the character of the area, with the promise of enhancing the historic appearance and feel of the area. Impacts on historic vegetation would be direct, local, moderate, beneficial and long-term.

Structures – Environmental consequences are the same for this alternative as they are for the No Action Alternative.

Introduction of non-historic features to the gravesite area – As discussed in the Circulation section, in order to accommodate pedestrian, bicycle, private vehicle and NPS shuttle-led visitation, this alternative would improve the existing road spur and parking area and introduce a trail that would connect the parking area with the family burial plot. In addition to the circulation changes, this alternative would introduce a fuller program of amenities and furnishings than Alternative 2. As in Alternative 2 bike
parking would be provided and a kiosk would welcome visitors to the site and provide park information. This alternative would also add two benches and a trash bin. Fences, compatibly designed but with less concern with profile in this alternative vs. Alternative 2, would demarcate the boundaries between NPS and neighbor properties and prohibit visitors from entering sensitive native habitat areas. Additionally, the loop trail in this alternative would be furnished with a small number of interpretive waysides where the trail in Alternative 2 had none. These non-historic features introduced into the landscape would again be designed to be compatible with the site and would be balanced by design measures that would not detract from the historic character of the area. Impacts to the cultural landscape would be direct, local, minor, adverse and long-term.

Archeology

Environmental consequences are the same for this alternative as they are for the No Action Alternative. There would be no impact to archeological resources.

Overall Environmental Consequences for Alternative 3

Overall, as described above, Alternative 3 would affect the Strentzel-Muir Gravesite cultural landscape and archeological resources through a number of actions that the NPS would implement at the site. Considered together, the overall effect of these actions on cultural resources would be direct, local, minor, beneficial and long-term. The difference between this finding and the environmental consequences for Alternative 2 (direct, local, moderate, beneficial and long-term) is due to the increased number of visitor amenities that would be installed at the site under this alternative.

Cumulative Impact for Alternative 3

When the impact of Alternative 3 on cultural resources is considered together with the present and potential impacts of the nearby projects listed in Table 6 in this chapter, the impact findings are unchanged. The projects listed in Table 6 have had (or would have) negligible impact on cultural resources. Therefore, the cumulative impacts on cultural resources at the gravesite due to Alternative 3 in combination with the projects listed in Table 6 would be direct, local, minor, beneficial, and long-term.

PHYSICAL RESOURCES

Affected Environment

Physical resources at the gravesite include geology, soils, and water. The bedrock geology of the gravesite consists of marine and near-shore sediments. The soil found at the Strentzel-Muir Gravesite is Botella series clay loam, which is commonly found in alluvial fans and floodplains. Permeability and drainage of this soil is moderate to good, and plant roots can penetrate more than 60 inches. Under normal circumstances and with the slopes found at the gravesite, this soil’s runoff potential is slow and its vulnerability to erosion is none to slight (Welch 1977). The Strentzel-Muir Gravesite is located within the 27-square kilometer Alhambra Creek Watershed. Alhambra Creek delineates the southeastern border of the gravesite, and then continues north into the Carquinez Strait. The creek flows seasonally from December to April, with sharply higher flows during and immediately following significant rainstorms.
Although some down-cutting (incision) of the creek bank at the gravesite appears to have occurred historically, current data shows that within the last ten years the creek bank has not experienced erosion, and may in fact have slightly aggraded in certain locations (Denn and Villalba, 2013). Strentzel Creek drains from the headwaters near the summit of Mt. Wanda and eventually into Alhambra Creek via a storm drain and culvert that runs under the north portion of the gravesite. The alluvial fan (lower segment) of Strentzel Creek, which historically included the area where the gravesite now lies, likely functioned as a floodplain. Development adjacent to and surrounding the gravesite has altered this functionality.
**Physical Resources Environmental Consequences**

**Methodology**
Physical resource analysis was based on a qualitative assessment of generalized physical resource types and typical effects of the type of impact described.

**Types of Impacts.** Activities that result in adverse physical resource impacts include the construction of structures, parking areas, and accessible paths that alter soil conditions, drainage patterns and levels of sediment in run-off. Beneficial impacts would protect physical resources from erosion and/or restore natural physical conditions.

**Alternative 1 (No Action):**
Under Alternative 1 (No Action) there would be no new impacts to soils. Continued monitoring of the creek would document changes, if any, over time. Very little ground disturbance would occur at the site. The No Action Alternative would have direct, local, long-term, negligible, beneficial impacts on physical resources.

**Cumulative Impacts**
Cumulative effects on physical resources are based on analysis of past, present and reasonably foreseeable future actions within the project area in combination with the potential effects of this alternative. Past actions
that would impact physical resources include the Strentzel Lane Flood and Sediment Reduction Project in 2002 and the Environmental Assessment for a Right-of-Way Application for the Sewer Line Installation at the John Muir Gravesite in 2007. Both of these actions addressed issues of erosion and flooding in the lower portion of the Strentzel Creek watershed. The only action in the reasonably foreseeable future that could impact physical resources is implementation of aspects of the Strain Ranch and Strentzel Creek Management Plan. However, specifics of this plan are yet to be developed. Past, present and reasonably foreseeable future actions within the project area in combination with the potential effects of the No Action Alternative would result in direct, local, long-term, minor, beneficial impacts to physical resources.

Alternatives 2 or 3:
Under Alternatives 2 or 3, minimal levels of ground disturbance would continue in the long-term. Construction of an accessible path, shuttle parking area, and boundary fence would cause some short-term disturbance. Restoration of native perennial vegetation with strong, deep roots would enhance soil stability around the riparian area providing protection of the creek bank. Installation of an accessible path would focus foot traffic to a single route, minimizing soil compaction in the rest of the site. Therefore, Alternatives 2 or 3 would have a direct, local, long-term, minor beneficial impact on physical resources.

Cumulative Impacts
Past, present and reasonably foreseeable future actions within the project area would result in regional, long-term, minor, beneficial impacts to physical resources while implementation of Alternatives 2 or 3 would have long-term, local, minor, beneficial impacts. Thus, the cumulative actions in combination with Alternatives 2 or 3 would result in a direct, local, long-term, minor beneficial impact to physical resources.

BIOLOGICAL RESOURCES

Affected Environment

John Muir National Historic Site supports an ecologically rich diversity of biological species and is comprised of hills and valleys in the coastal ranges of California, where the vegetation-growing season fluctuates between 200 to 300 days. The Strentzel-Muir Gravesite hosts dense riparian vegetation, with a canopy of evergreen and deciduous trees such as California buckeye, willow, and oaks, an understory of native poison-oak and California blackberry, and several invasive non-native plants including periwinkle, English ivy, and Himalayan blackberry. Although covering a small area, John Muir National Historic Site supports diverse wildlife species, especially along this riparian corridor, typical of the San Francisco Bay Area wildland–urban interface. Mule deer pass through the Gravesite area occasionally, and bobcat and mountain lion sightings have been reported nearby on Mt. Wanda. Other common, midsized to large vertebrate species include coyote, striped skunk, raccoon, and gray fox (Fellers, et. al. 2004), although the residential development adjacent to the Gravesite likely reduces the presence of the more reclusive species.

Biological Resources Environmental Consequences

Methodology
Impact analysis on biological resources was based on a qualitative assessment of the gravesite and the effects anticipated as a result of changes to site maintenance, re-vegetation, invasive species control, existence of wildlife habitat, and visitor use.

Types of Impact. Activities that disrupt the natural ecology and integrity of native plant communities, ground disturbance that can disrupt native plant communities and inhibit control of invasive species, and construction activities and human visitation promoting importation of non-native seeds, trampling of vegetation and/or directly removing, relocating or affecting wildlife by altering wildlife foraging, mating and nesting behavior or
wildlife habitat are considered adverse impacts. Mitigation measures including minimizing ground disturbance, revegetation using native species, mulch, or other stabilizing materials and monitoring the site for new invasive plant infestations minimizes such adverse impacts. Actions that preserve and/or restore vegetation continuity, native plant integrity, and wildlife habitat constitute beneficial impacts.

**Alternative 1 - No Action**

Under the No Action Alternative, there would continue to be minimal efforts to reduce and contain invasive plants and promote native vegetation at the site, particularly along the riparian area and some of the site perimeter. This would lead to a gradual spread of invasive plants and the suppression of native vegetation over time. A small amount of trampling would continue to occur from visitors, and the lack of designated footpaths, boundary markers and NPS presence on site. Introduction of new, non-native plant species would continue to occur, impacting the integrity of wildlife habitat. Alternative 1 would have a direct, local, long-term minor adverse impact on biological resources.

**Cumulative Impacts**

Cumulative effects to biological resources are based on analysis of past, present and reasonably foreseeable future actions within the project area in combination with the potential effects of this alternative. A past action that impacted biological resources is the Right-of-Way Application for the Sewer Line Installation at the John Muir Gravesite in 2007, while present actions include the Strentzel Meadow native plant re-vegetation efforts and Mt. Wanda invasive plant removal, and reasonably foreseeable future actions may include the Strain Ranch and Strentzel Creek Management Plan and the Mt. Wanda Vegetation Management Strategy, with improved native plant continuity and wildlife habitat. These past, present and reasonably foreseeable future actions within the project area would result in a direct, regional, long-term, minor beneficial impact. The cumulative actions in combination with Alternative 1 would result in a direct, local, long-term, negligible beneficial impact to biological resources.

**Alternatives 2 or 3**

Alternatives 2 or 3 call for an increased effort to reduce and contain invasive plants and restore native vegetation, particularly along the riparian corridor and site perimeter. This would include monitoring native and invasive species populations, and active management to promote the spread of native plants and the re-establishment of other native species that are appropriate to the site. Such efforts would enhance ecosystem function. Both action alternatives would increase human presence at the gravesite which could further favor human-tolerant animals and discourage species sensitive to the presence of people. Both action alternatives would establish designated footpaths which would reduce the likelihood of vegetation trampling by visitors. Restoration of native vegetation along the riparian corridor would improve the overall condition of wildlife habitat at the gravesite. Therefore, Alternatives 2 or 3 would have a local, long-term, minor beneficial impact to biological resources.

**Cumulative Impacts**

Past, present and reasonably foreseeable future actions within the gravesite area would result in direct, local, long-term, minor adverse impacts to biological resources while implementation of Alternatives 2 or 3 would have local, long-term, minor beneficial impacts. The cumulative actions in combination with Alternatives 2 or 3 would result in a direct, local, long-term, minor beneficial cumulative impact to biological resources.

**VISITOR EXPERIENCE AND ACCESS**

Visitor experience and access at John Muir National Historic Site is guided by the park’s purpose which calls for memorializing and connecting people with John Muir’s legacy. The ability for visitors to connect with
Muir’s legacy is dependent on a number of factors, including the availability of a range of recreational and interpretive opportunities throughout the park as well as the ability for a diverse array of visitors to access these opportunities.

**Affected Environment**

**Visitor Experience**
John Muir National Historic Site offers visitors a broad spectrum of education and recreation opportunities while exploring Muir’s historic home and remnants of his ranch. Visitors are able to enjoy the house and grounds, through guided or self-guided tours. A short film is provided at the visitor center, and the grounds offer educational wayside exhibits and opportunities for picnicking within the orchards. Mt. Wanda provides opportunities for hiking, photography, birdwatching, and other forms of nature study. The park’s Interpretation, Outreach, and Education Division provides a wide array of programs throughout the house site and Mt. Wanda, including daily public tours, curriculum-based school programs, nature and wildflower hikes, family campfire programs, full moon walks, and large special events. Every individual visitor to John Muir National Historic Site brings unique expectations, physical abilities, and backgrounds, and therefore has a unique experience.

Currently no interpretive programs occur at the gravesite; only drop in visitors come to the site, typically in small groups. Visitors drive into and park in the unpaved driveway, walk, or bicycle to the gravesite. Although the site is naturally flat, located on the broad alluvial fan of Strentzel Creek, there are no paths or parking areas that are accessible to visitors with disabilities.

The small parcel has retained its rural, historic character providing an ideal backdrop for the desired contemplative visitor experience. This experience, fitting of a gravesite, fosters reverence and opportunities to quietly reflect on Muir’s life and legacy. Because the gravesite still contains remnants of the original pear orchard and large trees such as the eucalyptus, oak, incense-cedar, and riparian vegetation that were present during Muir’s time period, visitors are able to immerse themselves in a past era and begin to imagine the Alhambra Valley at a time when it was covered in orchards instead of residential neighborhoods.

Although the historic scene beyond the gravesite has been altered over the decades with the addition of homes and ornamental landscaping, there are some borrowed views that continue to contribute to the original agricultural landscape. Looking eastward across Alhambra Creek, visitors see a steeply rising hillside densely covered in oak-woodland vegetation, similar to what was present historically. Views of the neighboring property to the south are also characteristic of what would have been present during Muir’s time, including historic pear trees that once connected with Dr. Strentzel's orchard on the gravesite parcel.

The natural soundscape of the John Muir family gravesite is generally peaceful and also contributes to the solemnity of the setting. Throughout the year a variety of ambient natural sounds can be heard from within the gravesite property. Birds calling and wind rustling through the riparian vegetation that lines the creek are common sounds, as is the characteristically gentle whispering sound of wind passing through the historic conifers and eucalyptus. Alhambra Creek can be a formidable source of natural sound during the rainy season.

**Visitor Access**
Historically, large gatherings including members of the Muir family, the Sierra Club, local historians, and the John Muir Memorial Association, came to the gravesite to commemorate Muir. These pilgrimages launched the effort to fight for and achieve recognition of Muir’s legacy, culminating in the designation of John Muir National Historic Site as a unit of the national park system in 1964.
Today, John Muir National Historic Site is open to the public seven-days per week from 10am-5pm. In terms of visitor access to the gravesite, the NPS does not currently disclose the location of the gravesite in any form (website, printed media, or verbally). On a typical week, one or two visitors at the house site ask park rangers where John Muir is buried; rangers will say “in Martinez,” but do not give directions or more specific information. Other websites such as the Sierra Club and the University of the Pacific mention the gravesite but refer inquiries regarding its location to NPS staff. A simple internet search yields multiple websites that provide easy to follow directions to the gravesite. None of these websites are affiliated with the National Park Service.

The NPS does not currently provide interpretive tours at the gravesite. There are very rare visits by special request and approval by the Superintendent, as well as occasional visits by Muir family members. Additionally, there is unmonitored visitation by the public, as noted by neighbors and park staff, but exact numbers of people visiting is unknown. The GMP for John Muir National Historic Site projected that the gravesite would receive 5-10 visitors per day once the NPS acquired it. The GMP projected that by 2020, that figure would double (10-20 visitors per day). However, observations in the field suggest the GMP numbers are significantly higher than reality.

From May 20, 2013 to June 3, 2013 a video camera was aimed at the small parking area in front of the chain “gate” at the gravesite, in an effort to estimate how many people visit the gravesite during a two week period. People who frequented the gravesite or parked in the parking area included visitors, park staff, and utility employees. The data shows that only eight individuals (excluding park and utility staff) came to, or passed through the gravesite property during these two weeks. Among these eight visitors were a number of gravesite neighbors riding bikes or walking through the property but not necessarily visiting the site. More data would need to be gathered to better quantify how many people come to the property expressly for the purpose of visiting the gravesite of John Muir and his family, but the data collected does not support the 1991 General Management Plan projections of 5-10 visitors per day.
Neighbors have noted that occasional late-night partiers come to the gravesite, typically leaving their trash behind and disturbing the neighborhood. One neighbor noted that these occurrences have diminished since the Strentzel Lane access from Alhambra Valley Road was eliminated by the land-owner a few years ago. Because the gravesite is tucked away at the end of an obscure access-driveway, surrounded by 0.5-1-acre single-family home parcels, and has no directional signage leading to it, the gravesite is difficult to find even when visitors have a map directing them to the site. Neighbors have remarked that visitors drive and park along Sheridan Lane, Wanda Way, and Strentzel Lane in search of the gravesite, often asking residents for directions, and sometimes trespassing on their private land.

**Environmental Consequences**

**Methodology**
This analysis evaluates the quality of visitor experiences in terms of how they might be altered as a result of the action alternatives. Professional judgment was applied to reach reasonable conclusions as to the context, intensity, and duration of potential impacts. Analysis was based on whether there was a complete loss of a recreation opportunity, a change in access to or availability of a recreation opportunity, a change in the quality of visitor experience or recreational opportunities (for example, visitor crowding). Impacts to visitor experience quality and recreation opportunities were assessed in terms of duration, intensity, and type. In terms of duration, a short-term impact on visitor experiences would be temporary in duration due to construction, restoration activities or a long-term impact would have a permanent effect on the visitor experience. Intensity level definitions are provided below.

**Types of Impacts.** Impacts were evaluated in terms of whether they would be beneficial or adverse to visitor experience. Beneficial impacts would enhance visitor participation, quality of visitor experience, and service level. Adverse impacts would reduce visitor participation, quality of visitor experience, and service level.

**Intensity Level Definitions:**
- **Negligible:** Negligible impacts would result in little noticeable change in visitor experience.
- **Minor:** Minor impacts would result in changes in desired experiences but without appreciably limiting or enhancing critical characteristics (critical characteristics are those elements of a recreational activity that are most important to those who pursue it.)
- **Moderate:** Moderate impacts would change the desired experience appreciably (that is, changes to one or more critical characteristics or appreciable reduction/increase in the number of participants).
- **Major:** Major impacts would eliminate or greatly enhance multiple critical characteristics or greatly reduce/increase participation.

**Alternative 1- No Action**
There would be no change to visitor management in Alternative 1. Once on site, visitors would experience the peaceful cultural landscape setting among the historic orchard along Alhambra Creek, but existing impacts to visitor experience would continue. These would include: not providing visitors with information regarding location and access to the gravesite, lack of interpretive opportunities, lack of visitor amenities, lack of accessibility for visitors with disabilities, lack of clarity regarding whether visitors are allowed on site, lack of management resulting in no opening and closing hours, and inconvenience to neighbors due to uninformed visitors who request information from neighbors. Because the NPS would continue to not manage visitation, Alternative 1 would not provide an avenue for limiting visitation, which could result in visitation numbers that exceed desired limits.

The No Action Alternative would result in a direct, moderate, long-term, negative impact on visitor experience and access.
Cumulative Impacts
The Strain Ranch Comprehensive Plan, the revised John Muir Long Range Interpretive Plan, and the Alhambra Valley Road Scenic Corridor Plan could contribute to cumulative impacts to visitor experience and access of the gravesite. The Strain Ranch Plan could potentially change the level of John Muir National Historic Site visitation at Mt. Wanda. The Scenic Corridor Plan calls for the addition of a pedestrian/bike path along Alhambra Valley Road. This road is currently unsafe for pedestrians. A new pathway along Alhambra Valley Road would allow visitors from throughout the neighborhood to safely access the gravesite by foot or bicycle. The Long Range Interpretive Plan could also change the type and quantity of interpretive programming throughout the entire John Muir National Historic Site. Because visitor use of the gravesite would remain un-managed in Alternative 1, when combined with these projects, Alternative 1 would result in a moderate, long-term, negative impact to visitor experience and access.

Alternative 2- Preferred Alternative
Under Alternative 2, there would be a direct, long-term, minor to moderate, beneficial impact to visitor experience and access due to the addition of ranger-led tours, self-guided tours, and a wheelchair accessible, natural-surfaced path from the shuttle drop-off area to the grave markers. The experience would also be slightly improved with the addition of an informational entrance kiosk that is compatible with the historic setting. Although visitors would have to plan ahead if they wanted to visit the site via NPS shuttle, the quality of the visit would be high. Through preservation of the cultural landscape, the NPS would continue to provide a peaceful, contemplative place of reverence.

Establishing regular shuttle access (up to 4 times per week) and allowing unlimited pedestrian and cyclist access during daylight hours would improve visitor access. A gate with locking mechanism would be installed at the entrance to the gravesite, ensuring that only authorized vehicles could enter the site. Once the gravesite access has been established and advertised to the public, it is anticipated that neighbors would no longer be relied upon by visitors to provide clarifying access and location information.

Cumulative Impacts
The Strain Ranch Comprehensive Plan, the revised John Muir Long Range Interpretive Plan, and the Alhambra Valley Road Scenic Corridor Plan could contribute to cumulative impacts to visitor experience and access of the gravesite. The Strain Ranch Plan could potentially change the level of John Muir National Historic Site visitation at Mt. Wanda. The Scenic Corridor Plan calls for the addition of a pedestrian/bike path along Alhambra Valley Road. This road is currently unsafe for pedestrians, and a new pathway would allow visitors from throughout the neighborhood to safely access the gravesite by foot or bicycle. The Long Range Interpretive Plan could also change the type and quantity of interpretive programming throughout the entire John Muir National Historic Site. Because Alternative 2 provides for stricter controls on visitor access through NPS management, when combined with these projects, Alternative 2 would result in a direct, moderate, long-term, beneficial impact to visitor experience and access.

Alternative 3
Under Alternative 3 there would be a direct, long-term, major beneficial impact to visitor experience and access when compared to the No Action Alternative. This is due to the addition of two parking spaces, one of which would be van-accessible (both would be available to the public during daylight hours) and the addition of regular NPS shuttle access to the site from the John Muir NHS visitor center (up to 2 times per week). Combined, these changes would notably improve the ability of visitors to freely access the site. Once the gravesite access has been established and advertised, it is anticipated that inconvenience to neighbors would stay the same as the No Action Alternative due to the ability for visitors to park at the site without an NPS escort—potentially contributing to the continuation of visitors driving around the narrow cul de sac seeking directions. Addition of directional signage on Sheridan and Strentzel Lanes would help mitigate this.

The visitor experience would be improved due to the addition of ranger-led tours and a wheelchair accessible,
natural-surfaced loop path from the shuttle drop-off to the grave markers. The experience would also be slightly improved with the addition of up to two interpretive wayside exhibits and up to two benches that are compatible with the historic setting. Through preservation of the cultural landscape, the NPS would continue to provide a peaceful, contemplative place of reverence.

**Cumulative Impacts**

The Strain Ranch Comprehensive Plan, the revised John Muir Long Range Interpretive Plan, and the Alhambra Valley Road Scenic Corridor Plan could contribute to cumulative impacts to visitor experience and access of the gravesite. The Strain Ranch Plan could potentially change the level of John Muir National Historic Site visitation at Mt. Wanda. The Scenic Corridor Plan calls for the addition of a pedestrian/bike path along Alhambra Valley Road. This road is currently unsafe for pedestrians and a new pathway would allow visitors from throughout the neighborhood to safely access the gravesite by foot or bicycle. The Long Range Interpretive Plan could also change the type and quantity of interpretive programming throughout the entire John Muir National Historic Site. In Alternative 3, the potential shift and/or increase in visitation in the Alhambra Valley Road/Strain Ranch area (due to these future projects) could increase the number of vehicles vying for parking at the gravesite. Therefore, when combined with these projects, Alternative 3 would result in a direct, moderate, long-term, beneficial impact to visitor access and experience.

**TRAFFIC AND CIRCULATION**

**Affected Environment**

**Public Transportation**

Contra Costa County Transit (“County Connection”) provides bus service from Martinez to North Concord BART every 40 minutes. This route includes a stop on Alhambra Avenue in front of the John Muir NHS visitor center. The closest stop to the gravesite is approximately 0.6 mile south of the visitor center at the Alhambra Avenue and Alhambra Valley Road intersection. From here, visitors would need to walk or bike 0.4 mile to the gravesite along Alhambra Valley Road: a narrow, winding, tree-lined road, with narrow shoulders and few sidewalks.

**Hiking or Mountain Biking over Mt. Wanda**

Pedestrians could—with some degree of confusion—access the gravesite from the John Muir National Historic Site visitor center by a route west past the Martinez Adobe, then south on a rustic footpath over Mt. Wanda towards Strain Ranch. Once visitors reach the Alhambra Valley Road, visitors would walk north to Sheridan Lane to reach the gravesite. This route is approximately 2.3 miles and includes a considerable elevation gain and loss over varied terrain. This route also includes a short section of walking along the busy, winding Alhambra Valley Road in an area with narrow shoulders and no sidewalks. Pedestrian access from the main house site property is further hampered by the fact that the visitor would be unable to re-enter the property near the Martinez Adobe upon their return because the gate on this side of the park is locked from the outside (visitors would only be able to re-enter at the visitor center on Alhambra Avenue). Mountain bikers could access the gravesite by starting at the Mt. Wanda trailhead parking lot at the intersection of Alhambra Avenue and Franklin Canyon Road. This route would follow the fire road over Mt. Wanda and would be approximately 2.0 miles one-way.

**Driving**

Vehicle access is currently possible from Alhambra Valley Road, to Sheridan Lane, then Strentzel Lane. According to the Contra Costa County 1992 “Alhambra Valley Specific Plan”, the county intends to maintain Alhambra Valley Road as a two lane, scenic road. The plan also calls for “enhancing public access to parks, trails and other public attractions.” The plan further states that Alhambra Valley Road should be limited to one travel lane in each direction while allowing safety features such as turning lanes while providing for separated pedestrian and bicycle trails within the 80-foot road right of way.
Figure 22. Pedestrian, cycling, bus access to gravesite (map not to scale)
Environmental Consequences

Methodology
The impact assessment focuses primarily on the effect of changes to visitor access to the gravesite and related impacts on traffic flow and parking. Transportation impacts are assessed in terms of duration, intensity, and type. In terms of duration, a short-term impact is one that would be created during the implementation phase of an action alternative (for example, temporary disruption of access created during construction of parking improvements). A long-term impact would be created through a permanent change to traffic generation, as well as changes to circulation patterns, following the implementation phase of an action alternative.

Types of Impacts. Impacts are considered either beneficial or negative on traffic flow and/or traffic safety conditions. Beneficial impacts would improve traffic flow and traffic safety by reducing levels of congestion and occurrences of vehicle/vehicle, vehicle/bicycle, and vehicle/pedestrian conflicts. Adverse impacts would negatively alter traffic flow and traffic safety by increasing levels of congestion and occurrences of such conflicts.

Intensity Level Definitions:

- **Negligible**: Negligible impacts are effects considered virtually undetectable and would have little discernible effect on traffic flow and/or traffic safety conditions.
- **Minor**: Minor impacts are effects on traffic flow and/or traffic safety conditions that would be slightly detectable, but not expected to have an overall effect on those conditions.
- **Moderate**: Moderate impacts would be clearly detectable and could have an appreciable effect on traffic flow and/or traffic safety conditions.
- **Major**: Major impacts would have a substantial, highly noticeable influence on traffic flow and/or traffic safety conditions and could permanently alter those conditions.

Alternative 1- No Action
Under the No Action Alternative, traffic and circulation on Strentzel and Sheridan Lanes would remain unmonitored by the NPS: gravesite visitors driving to the gravesite would continue to be confused due to lack of directional signage. Drivers would continue relying on neighbors’ help to direct them to the gravesite. Because the NPS would continue not managing visitation to the gravesite, there is the potential for visitation and traffic to increase over time.

Cumulative Impacts
The Alhambra Valley Road Scenic Corridor Plan could provide a separate pedestrian/bike path which could help alleviate some of the vehicle traffic on this busy road. This project could help diminish some of the adverse impacts to traffic and circulation caused by Alternative 1. The No Action Alternative when combined with the Scenic Corridor Plan would result in long-term, minor, negative impacts to traffic and circulation within the neighborhood.

Alternative 2- Preferred Alternative
Implementation of Alternative 2 would have a long-term, minor beneficial, impact to neighborhood traffic. By notifying the public that there is no onsite parking, it is anticipated that privately-owned vehicle traffic would decrease on Strentzel and Sheridan Lanes.

Cumulative Impacts
The Alhambra Valley Road Scenic Corridor Plan could provide a separate pedestrian/bike path which could help alleviate some of the vehicle traffic on this busy road. Alternative 2, when combined with the Scenic Corridor Plan would result in long-term, minor to moderate, beneficial impacts to traffic and circulation within the neighborhood.
**Alternative 3**

Implementation of Alternative 3 would likely have a long-term, negligible, beneficial impact on traffic and circulation when compared to the No Action Alternative. This alternative provides parking for two privately-owned vehicles (one van-accessible); therefore visitors would continue driving on Strentzel and Sheridan Lanes. There could be reduced confusion and fewer “circling” drivers in the neighborhood due to the installation of directional signs.

**Cumulative Impacts**
The Alhambra Valley Road Scenic Corridor Plan could provide a separate pedestrian/bike path which could help alleviate some of the vehicle traffic on this busy road, and could encourage visitors to walk or bicycle to the gravesite rather than drive their own vehicle. Alternative 3, when combined with the Scenic Corridor Plan would result in long-term, negligible, beneficial impacts to traffic and circulation within the neighborhood.

**HUMAN HEALTH AND SAFETY**

**Regulatory Framework**

NPS Management Policies (Chapter 8.2) state that “The National Park Service would make reasonable efforts to provide for the protection, safety, and security of park visitors, employees, concessionaires, and public and private property and to protect the natural and cultural resources entrusted to its care.”

**Affected Environment**

Current use of the gravesite primarily consists of staff conducting maintenance and management operations. The terrain throughout the site is fairly flat with minimal tripping hazards, except for the steep bank leading down to Alhambra Creek. The top and sides of the creek bank have dense patches of native poison-oak which pose a health problem for susceptible individuals, and the dense vines of blackberry and periwinkle pose tripping hazards. During the winter, the clay-rich soils of the site become sticky and adhere to shoes, which can create a slipping problem. Also in winter during peak runoff periods after heavy rains, the stormwater flows in Alhambra Creek are rapid, leading to potential hazards to anyone visiting the site during this time. The Strentzel Creek outfall into Alhambra Creek creates turbulent flows during these peak events. Despite cyclic pruning, the large ornamental and historic trees are subject to limb failure and wind throw during severe wind storm events. Annual maintenance of the site (including mowing) minimizes exposure to ticks which are otherwise prevalent in the area.

**Environmental Consequences**

**Methodology**
The Human Health and Safety analysis was based on a qualitative assessment of safety issues that exist and could occur in the plan area and the effects anticipated as a result of ongoing maintenance, rehabilitation, construction, and/or changes in visitor access. For the purposes of this analysis, an alternative would have an impact (negative or beneficial) on human health and safety if it:

- Results in direct changes to human health and safety issues.
- Causes indirect effects on human health and safety issues.

**Types of Impacts.** The type of impact refers to whether the effect is considered beneficial or adverse. Beneficial impacts would improve human health and safety. Adverse impacts would negatively affect human health and safety.
Intensity Level Definitions:
Impacts to human health and safety were evaluated using the process described at the beginning of Chapter 3. Impact threshold definitions for human health and safety are as follows:

- **Negligible**: Impacts to human health and safety would be largely unnoticed by staff and the visiting public. Existing programs and activities would remain essentially unchanged.
- **Minor**: Human health and safety would be affected, but the impacts would be limited in scope and not generally noticed by visitors.
- **Moderate**: Human health and safety would be measurably affected, and the impacts would be noticeable to some visitors.
- **Major**: Impacts to human health and safety would be widespread and readily apparent to most visitors.

**Alternative 1- No Action**
Impacts to human health and safety under Alternative 1 would be long term, negligible, and adverse. Current use of the gravesite would continue, with no change to address safety issues at the site.

**Cumulative Impacts**
The past, present, and future projects listed at the beginning of this chapter would not add to human health and safety impacts at the gravesite. Therefore, the cumulative impacts of these projects when combined with the No Action Alternative, would result in long-term, negligible adverse impacts to human health and safety.

**Alternative 2- Preferred Alternative**
Under Alternative 2, there would be a long-term, minor, beneficial impact to human health and safety. Planting of additional riparian vegetation would block visitor access to Alhambra Creek—minimizing existing hazards associated with scrambling down the bank. Installation of plant identification signs at the poison-oak brambles would help unknowing visitors avoid contact with this native plant. Installation of an accessible footpath and parking areas would minimize potential contact with ticks, and would keep visitors away from the historic and ornamental trees subject to limb failure.

**Cumulative Impacts**
The past, present, and future projects listed at the beginning of this chapter would not add to human health and safety impacts at the gravesite. Therefore, the cumulative impacts of these projects when combined with the Alternative 2, would result in long-term, minor, beneficial impacts to human health and safety.

**Alternative 3**  
(Same as Alternative 2) Under Alternative 3, there would be a long-term, minor, beneficial impact to human health and safety. Installation of fencing along the top of the creek bank would minimize existing hazards associated with scrambling down into Alhambra Creek. Installation of plant identification signs at the poison-oak-oak brambles would help unknowing visitors avoid contact with this native plant. Installation of an accessible footpath and parking areas would minimize potential contact with ticks, and would keep visitors away from the historic and ornamental trees subject to limb failure.

**Cumulative Impacts**
The past, present, and future projects listed at the beginning of this chapter would not add to human health and safety impacts at the gravesite. Therefore, the cumulative impacts of these projects when combined with the Alternative 3, would result in long-term, minor, beneficial impacts to human health and safety.
PARK OPERATIONS

Affected Environment

Interpretation and Education
Current interpretation and educational programming for the gravesite does not exist. Park staff do not disclose the specific location of the gravesite in any form (website, printed media, or verbally), but may mention the presence of Muir’s gravesite in Martinez, if visitors ask. Universities, local groups and organizations, neighbors, and the Muir-Hanna family are known to conduct field trips to the gravesite, but these are not managed by the NPS in any way. No exhibits or signs are present at the gravesite. Currently visitors drive and park along Sheridan Lane, Wanda Way, and Strentzel Lane searching for the gravesite and ask the gravesite’s neighbors for directions, but receive no formal information if they arrive at the gravesite. It is anticipated that this practice would increase over time as the general location of the gravesite becomes better known.

Facilities Management
Facilities management of the gravesite plot includes cyclic maintenance of the granite grave markers and the granite coping stone and the wrought iron fence surrounding the plot. Other routine maintenance inside the grave plot includes hand weeding of annual grasses and seedling trees. Maintaining the tall, historic ornamental trees that line the southern border of the gravesite property is a cyclic task consisting of periodic removal of dead wood and thinning of competing branches.

Orchard maintenance requires routine annual weeding using power equipment and hand pulling. A riding mower is sometimes used to maintain the orchard floor. Mulching around the pear trees takes place on an annual basis, to reduce weed growth around the trees and preserve soil moisture. Watering of the pear trees is a regular ongoing task throughout the dry season using a truck-mounted tank and hose. The new pear trees are pruned for structure and the old trees for disease on a routine basis, as is spraying the trees for pests as the need arises. Gopher trapping occurs regularly and is necessary to prevent irreparable damage to the pear trees.

Resources Management
Cultural Resources. Cultural Resource operations at the gravesite currently encompass cyclic maintenance of the grave markers in coordination with the Facilities Management Division, planning activities to implement the recommendations of the John Muir National Historic Site Cultural Landscape Report at the site and National Historic Preservation Act Section 106 review duties for activities that may affect the character of the historic property.

Natural Resources. There are very few natural resource management activities currently being conducted at the gravesite. Staff conducts informal, qualitative monitoring of resources, and semi-regular quantitative monitoring of the creek bank using established cross sections.

General Administration
The gravesite at John Muir National Historic Site is managed by the combined staff of the four national parks in Contra Costa County: Eugene O’Neill National Historic Site, John Muir National Historic Site, Port Chicago Naval Magazine National Memorial, and Rosie the Riveter/WWII Home Front National Historic Park. Staffing consists of the superintendent and deputy superintendent, and divisions of Interpretation, Education and Outreach; Planning and Administration; Resources Management; and Facilities Management. The overall operating budget of the four parks is approximately $3.1M, of which John Muir National Historic Site receives approximately $1M. In addition to these operating funds, John Muir National Historic Site receives $100,000-150,000 in project funding per year, primarily through maintenance, recreation, and youth funding sources. A small part of these funds are allocated towards management and maintenance of the gravesite property.
primarily focused on upkeep of the cultural landscape and the grave markers and plot, as well as monitoring of
the natural resources.

John Muir National Historic Site issues Special Park Use (SPU) Permits on a case by case basis after thorough
evaluation of the impacts of the use proposed. Currently, SPU permits have only been issued for the house
and Mt. Wanda properties within the National Historic Site. The Superintendent’s office occasionally
brings dignitaries to the gravesite, but these visits are brief and infrequent. The Superintendent’s office also
communicates with neighbors regarding complaints and concerns about the unmanaged infrequent visitation to
the gravesite by outside groups.

Environmental Consequences

Methodology
The Park Operations analysis was based on a qualitative assessment of park operations that could occur in
the plan area and the effects anticipated as a result of ongoing maintenance, rehabilitation, construction, and/
or changes in visitor access. For the purposes of this analysis, an alternative would have an impact (adverse or
beneficial) on park operations if it:

- Results in direct changes to park operation, facilities, staffing requirements or costs.
- Causes indirect effects on park operations or staffing.

Types of Impacts. The type of impact refers to whether the effect is considered beneficial or adverse. Beneficial
impacts would improve park operations. Adverse impacts would negatively affect staffing requirements or other
park operations services.

Intensity Level Definitions:
Impacts to park operations were evaluated using the process described at the beginning of Chapter 3. Impact
threshold definitions for park operations are as follows:

- **Negligible**: Impacts to park operations would be largely unnoticed by staff and the visiting public.
  Existing programs and activities would remain essentially unchanged.
- **Minor**: Park operations would be affected, but the impacts would be limited in scope and not generally
  noticed by visitors. Increases or decreases in the park’s operating costs and staffing workload would
  require some realignment of funds, but would not require substantial changes in the park’s overall
  operating budget.
- **Moderate**: Park operations would be measurably affected, and the impacts would be noticeable to some
  visitors. Increases or decreases in the park’s operating costs and/or workload would require realignment
  of funds and would alter the scope or quality of some programs.
- **Major**: Impacts to park operations would be widespread and readily apparent to most visitors. Increases
  or decreases in operating costs and/or workload would require substantial changes in funding allocation
  and would alter the scope and quality of multiple programs or basic operational activities.

**Alternative 1- No Action**
Alternative 1 would result in no change to current park operations, and would therefore have no impact. There
would continue to be a lack of interpretive programs and materials at the site. Existing resources (gravesite,
fruit trees and surrounding landscape and creekbank) would continue to be maintained on a cyclical basis, and
would continue to be managed as funds and staffing allow. No changes would occur to existing administrative
costs or workloads.
**Cumulative Impacts**
The past, present, and future projects listed at the beginning of this chapter would not add to impacts to park operations. Therefore, the cumulative impacts of these projects, when combined with the No Action Alternative, would result in no impact to park operations.

**Alternative 2- Preferred Alternative**
Alternative 2 would result in long-term, minor adverse impacts to operations. Interpretive programming would have to shift to provide staff for the added programs at the gravesite. It is anticipated that John Muir National Historic Site would not receive an increase in funding to accommodate this shift; therefore interpretation elsewhere in the park could suffer a minor reduction in programming. In order to accommodate the minor additional programming at the gravesite called for in Alternative 2 while maintaining the existing interpretive programming throughout the rest of the park, increased staffing would be required. It should be noted that additional funding to accommodate increased staffing is not anticipated in the reasonably foreseeable future. Therefore for the purposes of this analysis, it is anticipated that existing interpretive programming would need to decrease throughout the rest of the park to accommodate gravesite programming.

Installation of features to accommodate visitation would require additional annual and cyclic maintenance, in perpetuity. An entry gate with locking mechanism to restrict vehicular access to the site would be installed at Strentzel Lane and would require periodic maintenance and servicing. A surfaced driveway and parking area to accommodate park-operated shuttles would need cyclic maintenance, as would the proposed accessible pathway connecting the parking area and the gravesite, consisting of annual weeding and cyclic sealing or resurfacing. Maintenance upkeep of one informational kiosk at the parking area consists of periodic cleaning and repainting. The perimeter fencing proposed for the southern edge of the property may require periodic repair and would add time to annual mowing operations. There could be a slight increase in administrative workload associated with review and oversight of Special Park Uses permit activities at the site. Increased regulated visitation at the site could also increase unregulated visitation by pedestrians and bicyclists, with commensurate complaints and concerns raised by neighbors.

Proposed activities under Alternative 2 would increase natural resource management activities to include active invasive plant removal, native plant re-vegetation, and enhanced inventory and monitoring of aforementioned resources. All of these activities are already being conducted in other areas of the park by natural resource management staff. Therefore, under Alternative 2, the gravesite would simply be incorporated into current operations in a feasible manner. For cultural resources, cyclic maintenance of the grave markers would continue in the same manner as under the No Action Alternative. Planning for the removal of non-historic vegetation and its replacement with compatible vegetation and for replacing missing historic vegetation would represent an increased workload for cultural resources, but this could be accomplished at current staffing levels.

**Cumulative Impacts**
The past, present, and future projects listed at the beginning of this chapter would not add to impacts to park operations. Therefore, the cumulative impacts of these projects when combined with Alternative 2, would result in long-term, minor adverse impacts to park operations.

**Alternative 3**
Alternative 3 would result in local, minor to moderate adverse impacts to park operations over the long term. Interpretive programming would have to shift to provide staff for the added programs at the gravesite. It is anticipated that John Muir National Historic Site would not receive an increase in funding to accommodate this shift; therefore interpretation elsewhere in the park could suffer a minor reduction in programming. In order to accommodate the additional programming at the gravesite called for in Alternative 3 while maintaining the existing interpretive programming throughout the rest of the park, a slight increase in staffing would be required. It should be noted that additional funding to accommodate increased staffing is not expected in the reasonably foreseeable future. Therefore for the purposes of this analysis, it is anticipated that existing interpretive
programming would need to decrease throughout the park to accommodate gravesite programming, although since fewer NPS led tours would occur in Alternative 3 than Alternative 2, this decrease would be less severe under Alternative 3 than Alternative 2.

Maintenance of facility features common to those in Alternative 2 (i.e. informational kiosk, paved driveway and accessible footpath) would be similar but require more time and labor considering their increased footprint. The Alternative 3 driveway and parking area would be larger with the installation of two additional parking stalls including one van-accessible stall. Installation of a longer loop path approximately twice as long as that in Alternative 2 would increase annual and cyclic maintenance needs proportionally, and the construction of two benches along the pathway and at the gravesite would add to cyclic maintenance needs in the form of staining, repainting and repair. Maintenance of kiosk and waysides would be increased over Alternative 2 due to two waysides proposed for Alternative 3. Installation of a raccoon-proof trash bin near the parking area would require regular attention. There would be a similar increased administrative workload associated with review and oversight of Special Park Uses permit activities at the site. Increased regulated visitation at the site could also increase unregulated visitation by pedestrians and bicyclists, with commensurate complaints and concerns raised by neighbors.

Proposed activities under Alternative 3 would increase natural resource management activities to include active invasive plant removal, native plant re-vegetation, and enhanced inventory and monitoring of aforementioned resources. All of these activities are already being conducted in other areas of the park by natural resource management staff. Therefore, under Alternative 3, the project site would simply be incorporated into current operations in a feasible manner. For cultural resources, cyclic maintenance of the grave markers would continue in the same manner as under the No Action Alternative. Planning for the removal of non-historic vegetation and its replacement with compatible vegetation and for replacing missing historic vegetation would represent an increased workload for park staff, but this could be accomplished at current staffing levels.

*Cumulative Impacts*
The past, present, and future projects listed at the beginning of this chapter would not add to impacts to park operations. Therefore, the cumulative impacts of these projects when combined with Alternative 3, would result in long-term, minor to moderate, adverse impacts to park operations.
SCOPING

The park conducted both internal and external scoping with appropriate NPS staff, agencies, and the public to determine the range of issues to be analyzed in the EA. This scoping process was used to define the project purpose and need, identify issues and impact topics, outline reasonable and feasible alternative actions, and to describe and evaluate the relationship of the preferred alternative to other planning efforts in the park.

Internal and Public Scoping

Internal scoping included analysis from NPS subject matter experts including cultural resources specialists, horticulturists, hydrologists, biologists, education specialists, and maintenance staff from John Muir National Historic Site, and the Pacific West Regional Office. One alternatives development workshop was held with park staff. Another alternatives development workshop was held with members of the public.

Members of the public were invited to submit scoping comments during the public scoping period from March 6 to June 30, 2013. Comments were submitted by email, U.S. mail, fax and in-person. The NPS provided information about the plan and the public scoping period through the following means:

1. A press release announcing the beginning of public scoping was published by the Contra Costa Times on May 2, 2013. A press release announcing the end of public scoping was published in the Martinez Gazette on June 16, 2013.
2. The scoping announcement was sent to the John Muir National Historic Site email list serve, reaching approximately 124 subscribers.
3. The scoping period was announced via the park’s website.
4. Information regarding the project was disseminated at a public open house held at New Leaf Collaborative School in Martinez on April 9, 2013.
5. Additionally, the NPS hosted a public alternatives development workshop on February 22, 2014 which was attended by 28 individuals comprised of neighbors, Muir family members, university professors, park partners, and other stakeholders. The press release announcing the public workshop was published in the Martinez Gazette on January 30, 2014.

Twenty-one scoping letters were received from the Muir family, gravesite neighbors, park partners, local non-profit organizations, university professors, and individual members of the public. Based on scoping comments received, and federal laws, regulations, and executive orders, the NPS determined that an EA was the appropriate level of compliance for this project. For a summary of public scoping comments and how they were incorporated into the plan, refer to Chapter 1: Issues and Impact Topics.

REGULATORY COMPLIANCE

National Historic Preservation Act Section 106 Review

The Strentzel-Muir Gravesite has been found eligible for listing in the National Register of Historic Places as a contributing element to John Muir National Historic Site, a National Historic Landmark property. As a result, the National Park Service, because it is a federal agency carrying out a federal undertaking that may affect this historic property, is required to fulfill the provisions of Section 106 of the National Historic Preservation Act and its implementing regulations at 36 CFR 800. Accordingly, the NPS has entered into consultation with the California State Historic Preservation Officer for the purpose of determining the level of effect that the proposed undertaking would have upon the historic property, and to consider ways to avoid, minimize or mitigate any adverse effects that may be found. Involvement of the public in this review process is being carried out through the NEPA review process. Consultation was initiated by the NPS by letter dated May 30, 2013 and is ongoing.

There will be a 30-day comment period for the Environmental Assessment. Comments may be submitted in the following ways:

**Online:** [http://parkplanning.nps.gov/projectHome.cfm?projectID=45021](http://parkplanning.nps.gov/projectHome.cfm?projectID=45021)

**Email:** rori_superintendent@nps.gov

**In writing:**
Superintendent, John Muir National Historic Site
ATTN: Gravesite Plan
4202 Alhambra Ave.
Martinez CA 94553
**CHAPTER 6: GLOSSARY OF TERMS AND ACRONYMS**

**Affected environment:** Existing natural, cultural, and social conditions of an area that are subject to change, both directly and indirectly, as a result of a proposed human action.

**Action alternatives:** The alternative in a plan that proposes to make change to current management direction. “Action” means the proposed activity may take place, and the environmental effects resulting from action would be compared with the effects of permitting the proposed activity or the no-action alternative activity to go forward.

**Alternatives:** Sets of management elements that represent a range of options for how, or whether to proceed with a proposed project. An environmental assessment analyzes the potential environmental and social impacts of the range of alternatives presented, as required under the National Environmental Policy Act.

**Archeological resources:** Pre-contact and Post-contact, sites, features, structure ruins, and anything of a cultural nature found within, or removed from, an archeological site.

**Architectural Barriers Act Accessibility Standards (2013):** Federal guidelines established to add scoping and technical requirements in the establishment of camping facilities, picnic facilities, viewing areas, trails, and beach access routes constructed or altered by or on behalf of federal agencies. The final rule ensures that these facilities are readily accessible to and usable by individuals with disabilities.

**Area of Potential Effect (APE):** The geographic area or areas where a federal undertaking has potential to affect historic properties.

**Best Management Practices (BMPs):** Effective, feasible (including technological, economic, and institutional considerations) conservation practices and land- and water-management measures that avoid or minimize adverse impacts to natural and cultural resources. BMPs may include schedules for activities, prohibitions, maintenance guidelines, and protective fencing.

**Common to all:** Common traits among the action alternatives and the No Action Alternative identified by the project team, through public scoping and conference.

**Compatible:** A term used in historic preservation to describe the introduction of new features into a historic environment in a way that is harmonious with that environment.

**Contributing:** A term used in historic preservation to refer to individual historic features that help make up or contribute to the character of a historic property.

**Council on Environmental Quality regulations:** The Council on Environmental Quality was established by the National Environmental Policy Act and given the responsibility for developing federal environmental policy and overseeing the implementation of National Environmental Policy Act by federal agencies.

**Decomposed granite:** Is a natural granite, compacted surface often used as the surfacing of footpaths.

**Erosion:** The process in which wind or water removes soil from one location and deposits it in another location.

**Environmental assessment (EA):** A public document required under the National Environmental Policy Act that identifies and analyzes activities that might affect the human and natural environment. An environmental assessment is a concise public document which provides sufficient evidence and analysis for determining whether or not the proposed project would incur significant impacts to the human and natural environment.
Facilities: Buildings and infrastructure such as driveways, footpaths, parking areas, benches, gates, fences, utilities and kiosks.

Finding of No Significant Impact (FONSI): The public document describing the decision made on selecting the “preferred alternative” in an environmental assessment.

Historic or Cultural resources: Culturally valued pieces of real property and non-tangible values such as cultural use of the biophysical and built environments, and socio-cultural attributes such as social cohesion, life ways, religious practice and other social institutions. Can also mean properties that are listed in or eligible for the National Register of Historic Places.

Invasive (species): Is defined as a species that grows or inhabits a geographic range at an abnormally high rate due to the absence of competing species and other ecological factors.

Kiosk: A small structure, often with one or more open sides used to provide or display information.

Native vegetation: Flora endemic to an area over geologic time. Often used in habitat restoration to provide improved ecosystem function and stream bank stabilization.

Natural resources: A broad range of plant, animal, geologic and water resources.

No Action Alternative: The alternative in a plan that proposes to continue current management direction. “No action” means the proposed activity would not take place, and the environmental effects resulting from taking no action would be compared with the effects of permitting the proposed activity or an alternative activity to go forward.

Non-contributing: Non–contributing features of a historic landscape are defined as elements of the site that do not contribute to the historical significance of the site.

Non-native species: Species of plants or wildlife that are not native to a particular area and often interfere with natural biological systems.

Planning: An interdisciplinary process for developing short-term and long-term goals for visitor experience, resource conditions, and facility placement.

Preferred alternative: The preferred alternative is the alternative within the range of alternatives presented in an environmental assessment that the agency believes would best fulfill the purpose and need of the proposed action. While the preferred alternative is a different concept from the environmentally preferable alternative, they are one and the same for this environmental assessment.

Public scoping: Under the National Environmental Policy Act, public scoping assists in the environmental review process, by providing a means to inform the public about activities that involve a federal action and solicit their comments regarding the proposed action.

Restoration: Bringing back to a former condition.

Riparian: Ecosystems located along river banks, streams, creeks or drainages.

Visitor experience: The perceptions, feelings, and reactions a park visitor has in relationship with the surrounding environment.

Visitor use: Refers to the types of recreation activities visitors participate in, numbers of people in an area, their
behavior, the timing of use, and distribution of use within a given area.

**Wayside exhibit**: A combination of words and pictures on a two-dimensional outdoor panel providing interpretation, information or orientation to a specific landscape.
